Working w/ Sue #21

1.1 m North/South, 4 m. East/West oriented 85°

Structure 122 w. extension on w. side

Lot 1

1st meter from the west 0-20 cm down
measured from NW stake

Found - numerous sherds, some orange colored
jar parts, handle
obsidian blade

Lot 2

1st meter from W measured from NW ~~stake~~ stake 20-40 cm down

soil is much darker & clay-like
collected lots of sherds

obsidian blade - separate bag - in sherd bag

baja requé - separate bag - alone

carbon - separate bag - in sherd bag

bone - separate bag - in sherd bag

2 bags - one w/ sherds
one w/ baja requé

(at 20 cm mark) 40 cm - 3 slabs of shist

Lot 3

1 m. back from west 0-20 cm down

more sherds

will have to go down another 20 to see if shist continues

Miguel & Samuel are the coolest workers!
Sue & I are having a great time!

Working w/ Sue #21

P90-24-2 2/12/90

31D

S. Side of structure 120

450cm N/S 1m E/W oriented 11°
Lot 1 - 1st meter from the south 0-~~10~~cm measured from SW stake

Running into lots of cobble right at ground surface
probably not tumble since structure is not really a mound
stepped 1st 1 at 10 cm from SW corner - shreds found

Lot 2 - back 1m. to the ^{south} ~~west~~ - down ~~10~~cm 0-~~10~~cm
shreds 3 one piece of beja regue

Lot 3 - back 1m to south
some shreds - still a solid platform of rock

Too much rain - we're calling it a day!

2/13/90

P90-24-3

31A cont.

Lot #3 - bag #2

1m. W of original pit
0-20 cm lgs.

Working w/ shc #21

Lot #4 -

1m. W of original pit 20-40 cm lgs.

some baja regue
lots of shurds

shut slabs planted
obsidian

The sol is coming out ya! And I'm still feeling fine

Lot #5 0-20 lgs. 1m E. of original stake
rocks on E. possibly a wall
few, not many shurds

Lot #6 20-40 lgs. 1m. E. of original stake cleared cobble wall
looks like a cobble wall
baja regue 3 shurds
cleared wall - lots of tumble

Lot #7 40-⁵⁰ around rocks 1m. E. of original stake
tumble starts 226 cm from E. wall
dense concentration of tumble - 2 fallen cut blocks

found shurds, bone fragments

2/13/90

31A cont.

P90-24-4

- Lot #8 clearing rocks 1m. East of original stake
~~clearing~~ ~~same area as lot 7~~
~~clearing~~
uncovered flat stones - indicating a wall working between 226.3
0-60 cm bgs. shuds 296cm
from W pit wall
- Lot #9 same area as lot 7 - 1m. East of original stake
50-60 ~~cm~~ cm bgs.
cleaning up shuds
Found numerous shuds

2/13/90

~~P90~~ P90-24-5

31 D cont.

Lot #3 2m. S. of original pit 0-10 cm lgs.

Much! I hope the sun comes out today. I'm feeling fine!

What the hell are all of these rocks? Flat rocks? virtually no sherds. A plaza? A platform? For what? The mystery unfolds into... more rocks? one more meter back. God!

Found more sherds? a piece of obsidian - have to remember to modify the lot card from yesterday.

Lot #4 - ^(SW) 3m S of original ^{state} pit 0-10 cm lgs.

platform of cobble extending
some sherds, though not many

Lot #5 - ¹⁶ 4m S of original ^{state} pit 0-10 cm lgs.
cobble ending
found sherds, some (probably cow)

Lot #6 - ⁵ 6m S. of original ^{state} pit 0-20 lgs.
sherds - lots of sherds (2 big bags)
obsidian

braja regue

* stamp - two people facing each other - kind of cute!

Lot #7 - ⁵ 8m S. of original ^{state} pit 20-40 cm lgs. sherds

Lot #8 - clearing stones from lots 6 & 7 50cm into lot 6
150 cm from S. wall
110 cm basal wall starts 40cm over between being cleared
110

1m N of lot 1

31A

Lot #10

2m. E of original NW stake - exposing "surface" stone
Cleaning off surface to expose stones ³ hopefully define wall lines

shards found (3)

Lot #11

3m. E of original NW stake - exposing "surface" stone
Cleaning to expose wall lines if they are there

Lot #12

1m. W extended - 2m. W original NW stake 0-20cm lgs.
shards

Lot #13

1m. W extended - 2m. W original NW stake 20-40cm lgs.
see floor? bottle rim? (O) obsidian
shards chert tool (small ³ foot-shit)
lots of briza regue w/ twig marks carbon / small pieces

Lot #14

same lot as 7, 8, 39 clearing out all tumble ³ leveling it out to
1m E. of original stake ~~was 80~~⁴⁰⁻⁵⁰ cm lgs.
shards, jar handle w/ face like that in 31D
bone

31D

Lot #10 6m S of original SW stake / 1m S of 637
0-20 cm lgs.

lots of sherds & figurine face & arm I can't believe all of the sherds!
Tajá regue Two big bags full!

Lot #11 6m S. of original SW stake / 1m S of 637
20-40 cm lgs.

And our workers don't know what the hell we're saying to them - shit!
lots of sherds, sherd fragments

We've reached rock bottom again - do we go through it or not?
Clay another 10 cm - but who knows

Lot #12 OK. - we're doing it -

10 cm more in lot that is 6m S. of original SW stake / 1m S of 637
40-60 cm lgs. around rocks

Aridian piece, sherds
sherd fragments, carbon (small pieces)

Lot #13 5m S of original SW stake 40-50 cm lgs.
leaving large rocks, but clearing the rest

Le sol esta buena! Mucho gusto le sol!

pendent of ~~stone~~ clay - perfect
lots of sherds
stamp fragment (bird?)

p90-24-9

31D CONT.

Lot #14 3m N of SW stake 0-10cm bgs. clearing off cobble
lots of baja regue
few shreds

Lot #15 4m N of original SW stake 0-10 cm bgs. clearing off cobble
lots of baja regue & a few shreds

2/15/90

Lot #16 5m N of original SW stake 0-10cm bgs. clearing off cobble
shreds - odd that 15 had so much baja regue & this lot has ~~more~~ ^{only} one
minute piece

Lot #17 6m N of original SW stake 0-10 cm bgs. clearing off cobble - shreds & baja
regue

Lot #18 7m N of original SW stake 0-10cm bgs. clearing off cobble - shreds & baja
regue

15 Lot #19 8m N of original SW stake 0-20 cm bgs. clearing off cobble - shreds & obsidian
cobble seems to be ending
little baja regue
* deer tooth

Lot #20 8m N of original SW stake 20-40 cm bgs.
obsidian flake, shreds

16 Lot #21 9m N of original SW stake 0-20 cm bgs.
baja regue, shreds, obsidian

Will continue tomorrow

P90-24-10

31A

60-80
Lot #15 - ~~50-70~~ cm lgs. an area 53 cm by 1m ³ 70 cm by 1m
226 cm ³ 296 cm from W pit wall
1m E of original NW stake

* Add Luis Note # in on lot cards.

sherds, figurine fragment, obsidian, bone

Lot #16 80-90 cm lgs. same area as #15
looking for base of wall
obsidian, sherds, bone reggie

Lot #17 2m. E of original NW stake
Clearing rocks level w/ possible wall
sherds

Lot #18 3m E of original NW stake
Clearing rocks level w/ possible wall
encountered another possible wall 10 cm in - 16 cm hgt.
clearing rocks level w/ it

possible wall 100 cm from 1st possible wall
3m ³ 10 cm from original NW stake
20 cm high

See Luis notes for better sketch!
Decided it is not a wall w/ rock wedged underneath.
Continue to level w/ 1st possible wall
Finally, found a real wall

2/16/90

31 A Cont.

P90-24-11

Lot #18

3m 40cm East of NW stake is "Fitas" - on terrace wall
sheds, shield

Lot #19

2m E NW stake to 3.4m East of NW stake clearing to a
depth of 23 cm lgs.
furrows

another wall in front of "Fitas" called "Pompoms" 18-20 cm high
115 cm from "Noritoe"

2/16/90

P90-24-12

31A

- Lot #20 - 4m E of original NW stake
clearing to same level as "Cornmato"
found another step up called "Tostidos"
measuring 67cm E from Cornmato
poco tiestos, solo tiestos
- Lot #21 - 5m E of original NW stake - seem to be leveling off to top of mound
clearing to same level as "Tostidos" 13cm high
poco tiestos

Yo estoy sentada. Yo estoy parada.
pestar con gulle

- Lot #22 - 6m E of original NW stake - clearing platform slowly rising from
Tostidos
not many rocks, so clearing 0-20cm bgs.

It appears that we have a staircase - Noites being the first step.
Cobble lines the stairs on either side. It looks as if at one time Noites & Fritos
were leveled off together, Noites being raised to Frito's level.
shards, baja regue (lots)

- Lot #23 - 7m E of original NW stake - 0-20 cm bgs.
few shards

- Lot #24 - 8m E of original NW stake 0-20 cm bgs. shards & baja regue,
mostly rock but just a little lot

- Lot #25 - 9m E of original NW stake 0-20 cm bgs. shards, obsidian
no rock

P90-24-13

31D

Lot #21 cont. - sherds, obsidian, baja regue
9m N of original SW stake 0-20cm bgs.

Lot #22 - 9m N of original SW stake 20-40cm bgs.

319

February 22, 1990

- Lot #21 - 3m E of E wall of 31D; same NW as 31F trench. 10-20 cm lgs.
some sherds
- Lot #22 - 3m E of E wall of 31D; same NW as 31F trench. 20-40 cm lgs.
sherds and obsidian
- Lot #23 - 3m E of E wall of 31D; same NW as 31F orig. trench. 40-60 cm lgs.
obsidian & lots of sherds - statue frag. of parrot
polychromes corresponding to polychromes in 31F12 at 45 cm lgs.
- Lot #24 - 4m E of E wall of 31D; same NW as 31F orig. trench. 0-20 cm lgs.
it looks like there might be a line after the midlevel sherd
4 deposit - will see!
- Lot #25 - 3m E of E wall of 31D; same NW as 31F orig. trench. 20-40 cm lgs.
sherds, statue fragment in shape of a hand (man in apron)
obsidian
found a wall - very clear at E end of trench
will go down depth to define it clearly
201 ↓ 40 lgs. wall is 2 levels
- Lot #26 - 3m E of E wall of 31D; same NW as 31F original trench 40-70 cm lgs.
searching for bottom of wall
obsidian, statue mask, turtles

24321

31A

February 22, 1990

Lot #36 - 13 m E. of original NW stake. 0-20 cm lgs.
 seem to be going down the other side of the structure

Lot #37 - 9.1 m - 10.94 m. E of original NW stake
 clearing out more tumble in search of some sort of -
 any sort of line
 sherds, Baja regue, obsidian

I'm really beginning to despise this trench. It's all tumble - the think
 is there is no incline for things to tumble from. Just lots of jumbled rocks - it's
 getting boring fast and it's only 9th.

Possible line at about 10.9 m from orig. NW stake
 3 rocks on bottom 80 cm lgs.

Lot #38 - clearing tumble 9.8 m E of original NW stake
 few sherds

Lot #39 - clearing tumble 8 m E of original NW stake. 0-60 cm lgs.
 found a wall at 9 m

* Have cleared tumble in an area 8 m - 12 m from NW stake.

Lot # ~~40~~ 40

Clearing tumble at 7 m E of original NW stake
 bone, Baja regue, sherds

February 23, 1990

31F

- Lot #27 - 70-80 cm lgs. 3m L of E wall of 31D; same NW as 31F before crossing 31D
 Still searching for bottom of wall - pretty polyhromes & other sherds
 wall is 80 cm lgs. to 40 cm lgs. - it is bi-level - at lowest part 30-40 cm lgs.
- Lot #28 - 20-60 cm lgs. 2m L of E wall of 31D; same NW as 31F before crossing 31D
 searching for 2nd wall
 - bird whistle - one piece - found in this lot - > left dirt in it & flagged whole bag

I guess since we are finding things it is still tumble
 - lots of sherds and a little bit of baja regue - 3 bags of sherds so far
 * flagged - statue fragment of a face - a smiling face, incanario fragment w/ face

Tourismo at La Lina? What's wrong with this picture? Louise brought some tourists over - Americanos de Estados Unidos.

\$50 limps round trip to the Bay Islands by boat? Will see Joncho!

No wall !!

- Lot #29 1m L of E wall of 31D; same NW as 31F before crossing 31D 10-80 cm lgs
 looking for a mureo

Wall in Lot 25 is now ordained "227". God - I wish we had a t.v. out here - I feel so out of the real world

295 cm L of E wall of 31D 40 cm across
 top of high level is 30 cm lgs. 40 cm high => 70 cm lgs. is bottom of wall
 top of low level is 40 cm lgs. 30 cm high => 70 cm lgs. is bottom of wall
 60 cm across

Found another wall that lines up in level to 227 sherds

31A

Lot #41 - area 7-8m from original NW stake

Still clearing off tumble. I'd say it's starting to look like something we'll see. It still looks like a jumbled mess to me - create your own structure type stuff. I just don't understand where things could have tumbled from - were on top of the dammed mound!

It looks to me like we might have at least two structures going here rather than one. I hope we find out soon. This is getting pretty frustrating. I'm feeling kind of tired today and don't really feel like dealing with much of anything - people or rocks - you know?!

It looks like we may have a line in 6th m. about 20cm from NW wall. The next lot will be to clear the area between the line & the NW wall.

- Finding few shreds, obsidian, and briza regue - very little of each

Lot #42 - excavating from possible line in 6th m from orig. NW stake to NW wall (20m area)
20-40cm lgs.

finding shreds and briza regue

If line so - extend pit to 20-40cm lgs. 6m from original NW stake

Lot #43 - excavating from line in 6m oriented diagonally
40-60cm lgs.

line seems to correspond w/ line farther to the

E at about 7m east
shreds obsidian

Samuel & Miguel are learning English pretty quick. I lent Samuel my dictionary to study this weekend!

February 26, 1990

24, 21

P90-24-24

31A

Lot #44 - moving tumble 6m E of orig. NW stake to further expose a wall 0-80cm lgs.
few sherds (basically - we accomplished nada)

Lot #45 - 11m E of orig. NW stake, clearing out tumble level with line (obsidian, sherds, teeth, chert)
0-80 cm lgs.

found another human tooth - that makes 4 in this area.

Odd - could it be a burial? A dentist's office? Jimmy Hoffa? What?

The roots are still in tact, indication they were not simply lost, unless pulled

We just found another tooth - that makes 2 for the clay 5 total
Where are the other 2?

Lot #46 - 12m E of orig. NW stake, 80-100cm lgs. clearing tumble in front of
possible line sherds
found an ear plug

February 26, 1990

24, 21

P90-24-25

31F

Lot #30 3m E of original NW stake - looking for W wall of structure 0-40 cm lgs.

Naming wall found in Lot #29

"(or 54 Where Are You?!)"

1m E of E wall of 31D

actual wall is 58 cm high - it starts 20 cm lgs. and extends to 78 cm lgs.

It is oriented on a NW slant with the N coming out a ways farther

(Doesn't look much like a wall - does it?
At least I'm trying.)

finding lots of shards - No wall yet

Found a little statue part just laying in 31F this morning when we came in. Don't know where the hell it is from - so what do you do?

I hate to say it, but I'm hoping for rain. I just feel like being lazy today.

Oh my God - my workers just pulled the most hilarious thing out of the ground - it's shaped like this and the sucker is at least 19 inches long.

I've never seen them laugh so hard in my life. The panther worker grabs it and starts sticking a twig through the whole - fervently. I guess phallic symbols are universal, huh? I don't even want to touch the thing now.

Found out it is an incense burner sensor prong

baja regue, bone

~~P90~~ P90-24-28

31A

- Lot #47 10-11 m. E of original NW stake 70-¹⁰⁰ cm lrg. around possible basal wall
mano, sherds, carbon, tooth, jet line is one layer of rocks
very small mano - might not be one because it's so small - but who knows?
Lot #48 9 m. E of original NW stake 70-100 cm lrg. level w/ 47
lots of sherds, obsidian, bead

found another thing like yesterday more sherds the deeper we go

could it be a weight of some sort?

- Lot #49 5 m E of original NW stake - same provenience as 31A21
clearing tumble

February 27, 1990

P90-24-29

31K

- Lot #7 ³ 1m W of original NE stake 40-~~60~~ 70 cm lgs. shreds
encountering cobble, so will backstep to seek end of cobble
- Lot #8 2m W of original NE stake 40-~~60~~ 70 cm lgs.
looks like a terrace, so back 1m. shreds
- Lot #9 ~~2~~ 1m W of original NE stake 40-~~60~~ 70 cm lgs. starting to see terraces
shreds
- Lot #10 4m W of original NE stake 0-20 cm lgs. shreds
- Lot #11 5m W of original NE stake 0-20 cm lgs. shreds
- Lot #12 ^{1?} 2m W of original NE stake ~~100-120~~ 70-~~80~~ 100 cm lgs. orange soil soft-hand corner - lava reggie?
Carbon, shreds, obsidian

This confuses me. It looks like this trench terraces upwards to 31A which also goes up. The problem is, there is no clear summit - No living surface.

Thank God the rain finally stopped.

Its also odd that this trench hits rock at 70 cm down whereas Napei which is less than 2m away is at 20 cm lgs. or less. What is happening here?

2/27/90

P90-24-30

31F

Lot #36 - 5m^{5.62} E of original NW stake 40-60 cm lrg. to clear out in front of wall
shards, statue frag.

statue frag., shards

Lot #38 - 6m E of E wall of 31D 0-20 cm lrg. clearing off cobble
shards? debris

Lot #39 7m E of E wall of 31D 0-20 cm lrg. shards

Lot #40 5m E of E wall of 31D clearing tumble in line w/ 227 shards

UP Lot #41 6m E of E wall of 31D clearing tumble in line w/ 227 shards

February 28, 1990

P90-24-30

31F #42 7m E of E wall of 31D clearing tumble in line with "227"
found sherds & flat cobble surface 0-20 cm deep.
so will go deeper

31F #43 7m E of E wall of 31D 20-40 cm deep.
Thinking will find another cobble floor
Found a few sherds - no rocks

31F #44 7m E of E wall of 31D 40-60 cm deep.
soil - no rocks, but rocks seem to pick up in the
8m E of E wall of 31D
but before we clear that - we will go back to the 6th m
and clear the E half w/o rocks

6th m E of E wall of 31D sherds

31F #45 6m E of E wall of 31D 30-60 cm deep. to level w/ lot #44
sherds and obsidian

31F #46 7m E of E wall of 31D 0-20 cm deep.
just cobble - No sherds or anything!

31F #47 9m E of E wall of 31D 20-30 cm deep.
leveling in line with "227"

looks like we're coming up on another line at the end of the 9th m -
the E end - Makes me wonder how old the metric system is when the
lines keep showing up at the meter marks

31F #48 10m E of E wall of 31D 0-20 cm deep.
found a few sherds
trying to define line another empty lot?

February 28, 1990

P90-24-31

31A #50 6-7 m E of original NW stake. Clearing tumble.

We seem to have a wall to the E - at the E side of the ~~7th~~^{6th} m.
And we also have a floor surface at 70 cm lgs. which lines up to the surface in the 8th m.

So, we are taking out the rest of the tumble from this section - leaving the W wall (possible wall) and the possible corner.

Finding a few shreds, some bone, and a little lapidary, also some obsidian

Looks much cleaner!

Lot #51 clearing tumble to same level as possible wall at 12.2 m E of original NW stake in area 12.2 m - ~~12.2~~¹³ m E of original NW stake
65 cm lgs. at 12.2 m
revealing another line at 13 m shreds

Lot #52 clearing tumble to same level as possible wall at 13 m E of original NW stake in area 13-14 m
line is 50 cm lgs. shreds

G. - Miguel y Samuel are now moving back dirt. I wonder if they've passed.

P90-24-32
February 28, 1990

31K #13- 1m W of original NE stake. 100-110 cm lgs. from NE stake
Clearing down further to see possible line better
found sherds, bone (bird?), obsidian, bajareque

bajareque in soil appears as orange dust 110 cm lgs.

31K #14- 2m W of original NE stake. Clearing tumble looking for wall
to 110 cm lgs. at NE stake of pit.

This trench is so deep (especially compared to Nopis next door). I have
a feeling, though, that we will find some clear lines as we approach 31A
up the mound. Will see!

Found some obsidian, jute (one), bajareque

Coming up on a primary deposit - a red jar surrounded by carbon and
bajareque

Good soil stratigraphy in this trench - soil we're in now is very hard

120 cm down 162 cm from E wall 30 from N wall 55 cm from S wall
sherd itself is 10 cm wide 13 cm long

Bigger bumper for us - our worker went to clear a rock away and
the whole sherd lifted out!

31K #15 continue to excavate tumble 3m W of orig. NE stake in search of a wall
sherds possible wall at 84 cm down from N side of E
trench 2.1 m from orig. NE stake

February 28, 1990

P90-24-48

Lot # ~~65~~⁶⁶ 6-7.5 m E of 31F W trench wall, 5.3 m N of 31F N trench wall,
1-2.5 m W of 31 D E trench wall. Clearing out tumble, fatality,
10-70 cm lrg. looking for W continuation of \$6 Million Man

We are level with \$6 Million Man now, but the wall does not seem
to continue very clearly at all. I can't see it. So, we will have to
stop looking for it for now since we are approaching the kiln ring.
Perhaps we missed the wall, who knows —

But we're going back - extending the lot 45 cm S.
so now it is ~~4.55~~ 4.55 m N of N trench wall
→ 6 m

This lot is continued from yesterday so I must remember to fix this
on my lot cards and in the logs.

Found a nice obsidian blade - probably at the least 3.5 inches
long as well as some bone and lots of sherds

1:15 PM Still the same lot! We've found what might be a wall about
10 cm farther S than \$6 Million Man - we are clearing out the
corner between the two walls to see if they somehow connect -
Please!

Sue and I decided to call this lot 66 ³ to differentiate it from
lot #65 in that we are 4.55-6 m N of N trench wall clearing out
all debris to define wall.

6-7.5 m E of 31F W trench wall

1-2.5 m W of 31 D E trench wall 10-70 cm lrg.

March 7, 1970 PQD-24-53

Lot # 68 cont.

excavating 1st quadrant, NW quadrant of Adam 12
digging up tons of bajareque & bags of large chunks
I expected to see lots of shreds, but only 1/2 of a large bag has
come up. No carbon has been seen yet.

This is pretty exciting - I might like to stumble upon
something like this for my independent research project -
Fat Chance, right?

It looks like we might have a layer of cobble at 20 cm bgs.
We will try to go to 40 cm bgs. in the next lot if it is at all possible.

found tons (8 bags bajareque, 1/2 lg. bag shreds, 3 obsidian pieces)
Lot # 69 0-120 on EW baseline 21 jumpstreet NW quadrant
135 cm to N at where 120 intersects N side of circle Adam 12
20-40 cm bgs.

removing what we hope is tumble

shreds, obsidian pieces, some, though not nearly as much bajareque
↳ 1 large bag

Lot # 70 0-120 on EW baseline 21 jumpstreet NW quadrant of Adam 12
135 cm to N at 120 cm intersection of N side of circle
40-60 cm bgs.
Candlebag frag, lots of shreds, obsidian

Lot # 71 0-120 on EW baseline 21 jumpstreet, NW quadrant of Adam 12
135 cm to N at 120 cm intersection of N side of circle
0-20 cm bgs.

March 8, 1990

P90-24-54

31X

Lot # 25 cont. from March 1, 1990

1 m N of original SW stake

2 m N of 31 & E trench wall

Clearing out tumble 10-50 cm lgs.

obsidian piece,
shards, 3 some bajareque
(3 bags total) Today

Just we will do an extension of 31A between Ruffles and Jato Skins
to define a cut block feature previously unnoticed.

~~At 4:40~~

March 8, 1990

P90-24-55

31M

Lot #22 cont. from March 7, 1990

4m S of original NW stake

Clearing 20-80cm lgs. - tumble

few shreds ~~unintentional~~

Lot #23 5m S of original NW stake

Clearing 20-80cm lgs. - tumble

We took out the large cut stones in this lot. They look deliberately cut, but are definitely out of their original context - not good! So as nice as they were - they are out of there and are now a # catch along 31M!

Next we will move back dirt from the W side of the trench and do a 1x1 m extension at 3-4m S of original NW stake to try to trace a line out.

shreds 3 obsidian blade

Lot #24 2m S of original NW stake

2m W of E trench wall

A 1x1 m extension W to follow a possible line 0-20cm lgs.

shreds

Lot #25 2m S of original NW stake

2m W of E trench wall

A 1x1 m extension W to follow a possible line 20-40cm lgs.

bone 3 shreds

Lot #26 2m S of original NW stake

2m W of E trench wall

A 1x1 m extension W 40-55cm down lgs.

Expect to trace line at this depth

shreds, bone, 3 teeth

March 8, 1990
31.7

190-24-56

Lot #71 cont. from March 7, 1990

0-120 cm on E-W baseline 21 jumpstart

SW quadrant of Adam 12

135 cm to 120 cm intersection of 4th side of circle

~~100-120~~ 60 cm lq.

I have to remember to check the bag #'s w/ those I left in the lab from yesterday - we have 12 bags so far and that's a lot to keep track of from one lot.

I wonder if we have the means to analyze all of this bajareque in the lab.

- How is the surface bajareque different from that seen in the trench walls of Adam 12?
- Can carbon be traced in the bajareque that appears to have fallen from the walls of the superstructure?
- Is bajareque made in a kiln - if so could this be refuse?
- Can it be discerned from the placement of bajareque what the superstructure looked like? How did it melt or tumble?
- Do many of the pieces have twig markings suggesting their use as wall fillers? Or do no twig marks indicate another use such as a floor? Or perhaps no use at all - simply refuse?

I have so many questions!

- How does this bajareque from 31F compare to that in 31A or in the 19's?

Next we will continue going down to see if perhaps the circle Adam 12 was the top of a deeper pit - 60 cm lq. It could be since we continued pulling up shreds until 60 cm in the NW quadrant yesterday. So we will go down at least to 80 in the NW and SW quadrants. But still I wonder why it goes so deep when the apparent walls are so shallow.

* I would like to see an analysis of these deeper shreds in comparison to ones at the top to see if deeper ones are older, if ~~younger~~ ^{older} ones show

March 8, 1990

p90-24-57

31F

direct evidence of being fired and discarded thus (a firing fault), etc.
Also - if bajareque "melts" why doesn't it melt around the shreds?

If it is a blu - why is obsidian found? Are the pieces simply lost articles of an ancient person?

Shit! Our workers forgot to stop at 20cm and went right on digging to 40cm deep. So what was going to be 2 lots is now 1.

0-120cm on EW base line 21 Jumpstreet

SW quadrant of Adam 12

135 cm to 120 cm intersection S side of creek

0-40 ~~60~~ cm deep.

Most of the bajareque came from the first 20 cm - actually almost all of it came from the first 20 cm, whereas almost all of the shreds came from the 2nd 20 cm.

At. ? Buena!

13 bags total?

Found shreds (2 bags), bajareque (10 bags), 3 obsidian pieces

* Lot #72 0-120 cm on EW base line 21 Jumpstreet

SW ~~SW~~ quadrant of Adam 12

135 cm to 120 cm intersection S side of creek

40-60 ~~60-80~~ cm deep.

obsidian core fragment (1 1/2 inches long approx.), shreds (2 bags)

a little bit of bajareque

* Lot #73 0-120 cm on EW base line 21 Jumpstreet

SW ~~SW~~ quadrant of Adam 12

135 cm to 120 cm intersection S side of creek

60-80 ~~60-80~~ cm deep.

found a large approx. 6 inch long ~~shard~~ ^{polychrome} shard w/ beautiful designs

corresponds to polychrome deposits in middens

2 obsidian pieces, 3 piece of shell - like oyster shell or something 1 bag of shreds

March 8, 1990

P90-24-58

31A

2.0 x 1.0

- Lot #53 - A ~~10m~~ extension to the S. at 9.6 - 11.6 m E of original NW stake of 31A, following out Tato Skins line & Ruffles line 0-20 cm lgs. to start with obsidian, ~~by~~ bajareque, & sherds
- Lot #54 - A 2 x 1 m extension to the S at 9.6 - 11.6 m E of original NW stake of 31A, following out Tato Skins line & Ruffles line 20-40 cm lgs. finding bone, obsidian, and sherds

- don't really expect to find a line until at least 60 cm lgs.

- Lot #55 - A 2 x 1 m extension to the S at 9.6 - 11.6 m E of original NW stake of 31A 40-60 cm lgs expect to find Tato Skins & Ruffles soon sherds no line yet -

March 8, 1990

P90-24-59

31F

* Lot # 74 0-120 cm on EW baseline 21 jumpstreet

NW quadrant of Adam 12
135 cm to 120 cm intersection N side of circle
60-80 ~~100-120~~ 60-80 cm lgs.

shards & obsidian

* Lot # 75 0-120 cm on EW baseline 21 jumpstreet

SW quadrant of Adam 12
135 to 120 cm intersection S side of circle
80-100 cm lgs.

- just an experiment to see what we get!

We found a huge - 12 inch by 1 inch jar lip - ~~pink~~ black on red
and some of its corresponding pieces
plus other polychromes & some cord ware

There is a definite soil change in both the NW & SW quadrants
The soil is grey w/ bluish tinge 0-30 inch \Rightarrow grey 30-60 inch \Rightarrow
a clay-like brown soil where the polychromes are being found.

2 bags today -
1 tomorrow?

March 9, 1990

19024-60

31F

Lot # 75 cont. from March 8, 1990

0-120 cm on EW baseline 21 jumpstart

SW ~~1/4~~ ~~1/4~~ quadrant of Adam 12

135 x 120 cm intersection at circle's center

80-100 cm bgs.

found 12 inch x 6 inch black on red jar lip yesterday
polychromes underware

I have to go back and edit my lateads from 3/8/90 - I changed
the directions at the first minute - kind of like a true/false test -
not a good thing to do, to go against impulse when the data is not
right in front of you.

Lot # 76 0-120 cm on EW base line 21 jumpstart

NW quadrant of Adam 12

135 x 120 cm intersection at circle's center

80-100 cm bgs.

It appears there is the high ring of rocks at ground
surface, a 10cm layer of bajareque, and then a lower
ring of rocks. This is very apparent in the NW
quadrant.

1 GS.

2 BAJAREQUE APX. 10cm BGS

3 GREY DUSTY SOIL APX. 30cm BGS

4 CLAY BROWN APX. 60cm BGS. //

March 9, 1990

PAO-24-61

31A

Lot #56 - A 2x1 m extension to the S at 9.6-11.6 m E of original NW stake of 31A
60-80 cm lgs.

expect to find Taro skins and Ruffles soon to the S

found another one of those basalt rocks with the pole in it

This is the third or 4th one
we've found in 31A.

What are they used for? Some sort of weights? What if a pole
was stuck through the hole? What could it be used
for then? Barbells? No. really -
They are not all uniform size - could they be the result - the refuse
of the manufacture of some other product?

shards, basalt stone w/ hole, shudans, phone

Lot #57 - A 1.8x1 m extension to the S at 11.6-13.4 m E of original
NW stake of 31A

1 m S of 31A original S trench wall

0-20 cm lgs.

only a small amount of shards

Lot #58 - A 1.8x1 m extension S at 11.6-13.4 m E of orig. 31A NW stake
1 m S of 31A orig. S trench wall
20-40 cm lgs.

stone and shards

March 9, 1990

190-24-62

31M

Lot #27-2.3m S of original NW stake

2m W of ^{31M} E trench wall

a 1x1 m extension W 55-70 cm deep.

still expect to see line (possible line) at this depth
shells and pottery fragment (mostly face?)
(3 smaller bags)

Lot #28-3m S of original NW stake

2m W of 31M E trench wall 0-20

a 1x1 m extension W ~~55-70~~ cm deep.

to find line cont. not found in #27

1 of obsidian piece & 3 smaller bags of shells

Lot #29

3m S of original NW stake

2m W of 31M E trench wall 20-40 cm deep.

a 1x1 m extension W shells & obsidian piece

Lot #30

4m S of original NW stake

2m W of 31M E trench wall 0-40 cm deep.

30 cm where rocks are

shells

March 9, 1990

190-24-~~62~~ 63

31F

Lot #76 cont. few shreds

I am noticing another soil differentiation

Strange that the SW quadrant of Adam 12 had a large well preserved sherd deposit at 80-100 cm bgs. whereas the NW quadrant had little in comparison. I suppose 1 big jar could have formed the large deposit in the SW corner, but I don't know that for sure yet.

Lot #77 0-120 cm of EW baseline 21 jumpstart

SW quadrant of Adam 12

135 & 120 cm is intersection at circle center

100-120 cm bgs.

- more for fun than anything else - to see if we reach stick or if this was a deep pit.

We seem to be hitting stick here at the onset of the texture downwards anyway.

pieces of polychrome found yesterday 3 black on reds among other shreds (1 bag)

Lot #78

5-6 m E of 31F trench wall

5m N of 31F trench wall

2.5-3.5 m N of 31D trench wall

following out wall

0-20 cm bgs.

lots of obsidian 2 smaller bags o' shreds

March 9, 1990

P90-24-~~64~~61

31F

St #79 5-6m E of 31F W trench wall
5m N of 31F N trench wall
2.5-3.5m W of 31D E trench wall 20-40 cm deep.
2 bags of shreds

St #80 5-6m E of 31F W trench wall
5m N of 31F N trench wall
2.5-3.5m W of 31D E trench wall 40-⁵⁰ cm deep.
expect to find the Six Million Dollar Man somewhere in here
found a statue - a pig or a cow as well as shreds and obsidian

March 9, 1990

31A

Lot #59

P90-24-65

A 18x1 m extension Sat 11.6-13.4 m E of original 31A NW stake
1 m S of 31A original stretch wall
210-60 cm deep.
sheds 3 bone

And - Crunches moved - will clear ~~it~~ around it
dupr tomorrow.

March 12, 1990

P90-24-66

31A
Lot #60

8m - 9.6m E of original 31A NW stake
1m S of 31A Trench wall 0-20 cm bgs.

shards 3 one obsidian piece
Lot #61 7-8 m E of original 31A NW stake
50cm S of 31A Trench wall 0-20 cm bgs.

few shards
Lot #62 11.6-13.2 m E of original 31A NW stake
1m S of 31A Trench wall 60-80 cm bgs.
following out crunchers, Tato skins, 3 possible line between

found another doughnut^{mat} rock (basalt)
this one has about a 7cm diameter
and the hole is in the middle instead of at one end.
This makes about 4 for this area.
Crunchers is looking good.

It has fill (debris) underneath as support

Lot #63 12.7-13.7m shards 3 basalt doughnut
~~12.7-13.7m~~ m E of original 31A NW stake
2m S of Trench wall of 31A 0-50 cm bgs.
0-50 to line 0-70 other

30 cm bgs.
Lot #64 shards, basalt, 3 obsidian

Lot #65 11.7-12.7m E of original 31A NW stake
2m S of Trench wall of 31A 0-50 cm bgs.
BUGLES

March 12, 1990

P90-24-67

3IF

Lot #81

SE quadrant of Adam 12

120-240 cm on E-W baseline 21 Jumpstreet S side

0-~~30~~ 30 cm bgs. - They got a little
excited again

Again finding huge
chunks of basalt and few shreds.

just like the first lots in the other two quadrants (NW & SW)
of Adam 12 completed.

Lot #82

SE quadrant of Adam 12

120-240 cm on E-W baseline 21 Jumpstreet S side

30-40 cm bgs.

shreds

* A beautiful wall is coming up under the rock circle in this
quadrant. It is made of cobble. We are going to keep going down to
find out how deep it goes.

Lot #83

SE quadrant of Adam 12

120-240 cm on E-W baseline 21 Jumpstreet S side

40-60 cm bgs.

lots of shreds & obsidian

Wall is firm to 60 cm bgs.

Lot #84

SE quadrant of Adam 12

120-240 cm on E-W baseline 21 Jumpstreet S side

60-80 cm bgs.

obsidian, shreds - some large pieces

Finally found some carbon - 2 large chunks - will see if it's testable

While cataloging artifacts last night, I noticed that the two
Idol from 3IF had firing faults and one of the rims of a jar was
deformed. This points to the theory that Adam 12 was a kiln
and the middens were mistakes made in the kiln. I would
like to see more of the catalogue items from here for further evidence.

March 12, 1990

190-24-68

31M

Lot #31

4m S of original NW stake, 2m W of 31m E trench wall 40-60 cm deep.
clearing tumble looking for lines
pulled up a large mano half - similar to the ones just a few structures
away

We also have some apparent walls & lines

will clear laterally 5m Sand then come back in at Loc 3
to remove tumble

Lot #32

5m S of original NW stake, 2m W of 31m E trench wall 0-40 cm deep.

bone, shards, & obsidian
found doughnut basalt rock here -
that makes three for the day
what the hell are these things?

This one is more square, hole is at top not middle
bone, obsidian, & shards

PPD-24-74

31F

Lot # 88 NE quadrant of Adam 12
120-240 cm on EW baseline 21 Jumpstreet
0-20 cm bgs.

lots of bajareque (5 bags) and one bag of shreds

Lot # 89 NE quadrant of Adam 12
120-240 cm on EW baseline 21 Jumpstreet
20-40 cm bgs.

bajareque, shreds
* some of the shreds have the orange cast to them as others
found in parts of 31F & 31D - maybe a firing error?
To support my thesis?

Soil sample of ashy dirt at 30-40 cm bgs. labelled in lot # 89

The two cut blocks that are at the end of the N vent sit on top of -
a dense bajareque concentration:

trying to divide NE artifacts into
bajareque, ashy, & clayey sections

6 bags soil, bajareque, shreds. } as still in ashy soil will
also pieces of obsidian } start new lot probably down to
40 cm bgs. - but will see how
far down it actually goes ->

Lot # 90 - NE quadrant of Adam 12
120-240 cm on EW baseline 21 Jumpstreet
40-60 cm bgs. ashy soil
shreds - some quite large
censer prong

3 bags - 1 has refuse bajareque from walls of
the first 20 - lot # 88

March 14, 1990

190-24-75

3K
Lot #21 2.5-8.5 m N of 31K E trench wall
a 1x1.3 m trench (by accident this last was a trapaid)
1 m N of 31K N boundary (where 31A & 31K meet at summit)
following summit out
2 m S of 31K S trench wall 0-30 cm bgs.
shards and obsidian

Lots of possible lines, but can only see them if we clear a larger area

Lot #22 2.5-8.5 m N of 31K E trench wall
1- m N of 31K N boundary
1- 2 m S of 31K S trench wall
a 2x1.3 m area
removing lots of tumble shards, obsidian, metatae foot

The day of metatae foots - found one here -
it's thicker than the 31M fragments, though

March 14, 1990

190-24-76

31M

Lot #40

5 m S of original NW stake

3 m W of 31 M E trench wall, clearing tumble

30- cm bgs.

Metate fragment w/ part of foot - probably part of the one found yesterday in 31M/30

Metate fragment, and shreds
→ face

Lot #41 7 m S of original NW stake

1-2 m W of 31 M E trench wall

0-20 cm bgs. going up structure's summit

bayinque, shreds

Lot #42 8 m S of original NW stake

1-2 m W of 31 M E trench wall

There appears to be decayed bayinque in the ^{going up structure's summit} S ~~SE~~ corner of the lot and perhaps some ash soil in the middle

March 14, 1990

P90-24-77

31A
Lot # 67 3m E of 31 L ^E trench wall
2m S of 31A S trench wall.
4m W of 31A/31K summit boundary, clearing tumble level
with Bugles → 50cm bgs.
10.7-11.7m E of original 31A NW stake
sheds 3/4 piece of obsidian

Lot # 68 3m E of 31 L ^E trench wall
3m S of 31A S trench wall
3-4m W of 31A/31K summit boundary
10.7-12.7m E of original 31A NW stake
a 1x2m extension S

March 14, 1990

P90-24-78

3/F

Lot # 91-

NE quadrant of Adlam 12
120-240 cm on E-W baseline 21 Jumpy street
ashy soil
60-80 cm bgs. 1 sherd bag, also another
polished

Lot # 92

NE quadrant of Adlam 12
120-240 cm on E-W baseline 21 Jumpy street
yellow soil - sample
80-100 cm bgs. Surprisingly not many sherds
Expected lots of polychrome but don't seem to be
getting any.

Lot # 93

NE quadrant of Adlam 12
120-240 cm on E-W baseline 21 Jumpy street
100-120 cm bgs

March 15, 1990

190-24-79

31F

Lot # 93

NE quadrant of Adam 12

120-240 cm on EW baseline 21 jumpstart

100-120 cm lgs.

shards - strange as little

when other quad. had lots at this depth

Lot # 94

6.56- 6.96 m E of 31F W trench wall

excavating the vent on the S. side of Adam 12

~~4.90- 4.90~~ cm from EW baseline 21 jumpstart

135-265 cm from EW baseline

40x70 cm area

12 cm below Adam 12 wall line

few shards & bajareque

Lot # 95

135-269 cm from EW baseline N

a 56 cm x 140 cm area

vent of N side of Adam 12

6.45- 7.01 m from 31F W trench wall

the S vent looks like this

any
hardly any shards
some bajareque

the N vent:

10 cm at shellboard
Lots of shards 20 cm at deepest
from top of rocks
lots & some bajareque
more than S side

This suggests a functional difference to me. Perhaps in the S? out the N?

One shard was exceptionally different - FLAGGED - it has a raised human figure wrapped in a snake

March 15, 1990

P90-24-80

31A

Lot # 68 / ~~3~~ 3 m E of 31 & E trench wall, 3 m S of 31A Stench wall,
3-~~7~~ 5 m W of 31A / 31K summit boundary, 10.7-12.7 m E of
original 31A NW stake a 1x2 m extension S, 3 m S of Stench wall of
shards and one little bone 31A

Lot # 69 1-2.5 m W of 31A / 31K summit boundary,
5-7.5 m E of 31K trench wall,
12.7-15.2 m E of original 31A NW stake
a 1x2.5 m extension S
3 m S of Stench wall of 31A

Now we have so many lines we don't know what to do -
so we are just going to keep clearing. M 3A are now connected!

bone 3 shards

Lot # 70 11.7-12.7 m E of original 31A NW stake
7.5-8.5 m W of 31A / 31K summit boundary
~~3~~ 5 m S of 31A Stench wall
~~40cm~~ 40cm E of 31K trench wall
vayinque 3 shards 3 small bags 15cm bags.
statue frag.

March 15, 1990

P90-24-81

31M

- Lot # 43 - 9m S of original NW stake, 1-2m W of 31M E trench wall
connecting 31M to 31A at structure summit
jaw of an animal, bajareque, bone, obsidian, 3 shreds 40cm bgs.
- Lot # 44 - 7-to end of 9mm S of original NW stake, 1-2m W of 31M
E trench wall, removing tumble to clarify lines
metatae frag, shreds 50cm bgs.

March 15, 1990

P90-24-82

31F

Lot # 96

removed the 2nd cut stone from the S of the N-west
the stone closest to just like 10 of 66

checking to see if cut blocks were tumbled on a
foundation

Chances are - if there are sherds here it was tumble -
if not - whoops!

There are some sherds, though not many.

The cut stones are at least 2 layers deep - stacked on top of each other.

What is this stuff?

Lot # 97

Still looking for just the 10 of 66 clearing tumble

~~2m S of 31F~~ Suppl

4m N of 31F & trench wall

5m S of 31E trench wall

sherds & obsidian pieces

March 16, 1990

P90-24-83

31A

Lot #71 11.7-12.7m E of original 31A/W stake
7.5-8.5m W of 31A/31K summit boundary
5m S of 31A trench wall
40cm E of 31L E trench 15-40cm lgs
metate fragment, bajareque, sherds, 3 obsidian

We have such a mish-mash of stuff here, lines everywhere, but none are totally clear. If we go to follow one, we'll disturb another. What to do?

Lot #72 1-2.5m W of 31A/31K summit line
1.5-3.0m S of 31A & 31K trench walls

clearing tumble
starting 10cm lgs in some places, 20cm
lgs. in others down 20cm lgs.

March 16, 1990

9m S of original ^{31M} NW stake, 3m W of 31M E trench wall
looking for *Knunches* and *Import Good*
chert, obsidian, sherds

finding bone - possibly human skull at 50cm bgs.
but no other bones

finding decayed *jute* in soil at 60cm bgs. 3 some full
jute pieces found *Knunches*
0-60cm bgs.

Lot # 46 9m S of original NW 31M stake, 4m W of 31M E trench wall
looking for *Lato Skins* a 1st 1m est. W
0-20cm bgs. not far enough for walls yet

March 16, 1990

P90-24-85

31F

Lot #98

4m N of 31F N trench wall, 4m E of 31F W trench wall
6m S of 31D E trench wall, 0-20 cm bgs.
a 1x1 m extension looking for continuation of just the 10 of the
N wall of structure

No wall - shreds of bone, obsidian

It looks like it's going to be hell finding the rest of the N & W walls
because we appear to be on a little platform again, for the only
thing we can do is keep going back to the W.

Lot #99

4m N of 31F N trench wall, 3m E of 31F W trench wall,
7m S of 31D E trench wall, 0-20 cm bgs.

looking for N & W structural walls 1x1 m ext.
obsidian, shreds (some polychromes) but, no walls

* New set-up because we reached 100 →

31Q Lot #1

2-3m N of 31F N trench wall, 6m S of 31D E trench wall,
4m E of 31F W trench wall 1x1 m ext. looking for N & W walls

metatae foot, obsidian, shreds (some polychromes)
odd that polychromes are close to g.o. in the surrounding
areas they were at least 60 cm bgs. 0-20

Lot #2

1m N of 31F N trench wall, 6m S of 31D E trench wall
4m E of 31F W trench wall a 1x1 m extension looking for W wall
Emergency!

found another metatae foot (maybe we can piece the whole
thing together), shreds 3 or 4 - very few surprisingly

Lot #3
shreds of
obsidian but

4 5m N of 31F N trench wall, 4m E of 31F W trench wall
6m S of 31D E trench wall a 1x1 m ext. N 10
to come in on just the 0 of the more easily 0-20 cm bgs.

March 19, 1990

P90-24-86

31Q

✓ Lot #4 - 5m N of 31F N trench wall, 4m E of 31F W trench wall,
6 m W of 31D E trench wall a 1x1 m Lat. NE
10-20cm bgs.

2 bags of shreds & a few obsidian blades

✓ Lot #5 -

5m N of 31F N trench wall, 4m E of 31F W trench wall,
6 m W of 31D E trench wall a 1x1 m Lat. NE
looking for just the 10 of Us, 20-40 cm bgs.
3 bags of shreds, obsidian, chert, & a small
foot that looks like:

✓ Lot #6 apx. 4-5 m N of 31F N trench wall, 4m E of 31F W
trench wall, 6 m W of 31D E trench wall
taking out tumble in order to find just the 10 of Us

This is strange, though, because the 31F wall just the 10 of Us
seems to pass the W wall & emergency! - perhaps E is not the real wall

Then why
so far out?

shreds (some very large)
bajareque
obsidian
bone

31Q

Lot #18 5m S of 31F N trench wall, 4m W of 31D E trench wall, 3.3m N of 31D S trench wall, 0-20 cm deep.

defining corner of Thies Company mortuary to see if it is oriented straight or on a curve or diagonal
obsidian core frag, obsidian blades (2), and shreds

Lot #19 5m S of 31F N trench wall, 4m W of 31D E trench wall, 3.3m N of 31D S trench wall, 20-40 cm deep.

defining corner of Thies Company
obsidian, shreds

The wall here is so nice!

Lot #20 5- $\frac{7}{8}$ m S of 31F N trench wall, 4m W of 31D E trench wall, 1.3-3.3m N of 31D S trench wall, clearing tumble in a 3x1 m area to clean up wall - Thies Company corner to see if wall goes due N or N W at an angle
shreds

The wall does in fact go on a diagonal

at 7 $\frac{8}{8}$ m S of 31F N trench wall it is	4.28 m W of 31D E trench wall
at 6 $\frac{7}{8}$ m S	4.45 "
at 5 $\frac{6}{8}$ m S	4.64 "
and at 4 $\frac{5}{8}$ m S	4.77 "

so it is a gradual slant towards the NW

Thus, until the other walls are found to their orientations are determined in respect to this one, I don't quite understand this platform's shape.

March 23, 1990

P40-24-105

38A

This is a flat structure next to 38C. The trench is ~~1~~ 6m long extending N to E. It goes through the center of the structure. The structure appears to be very small, perhaps only 8m E-W - 6m N-S. There is some speculation that it might be a kitchen or something for this possible residential cluster.

Lot 01 - a 1x1m square 1m E of original NW stake 0-30cm bgs.

I am really not finding much of anything here in terms of structure or artifacts. One or 2 shreds, a couple of small sherd fragments I discarded (could have been part of a floor - but two small fragments don't really show anything), and nothing else so far. At 20-30cm bgs. there is a tiny bit of jute - also a bit of lumpy incised sherd. Most of the shreds are jicars. Also discarded 2 white "chalk" rocks.

Lot 02 - Hopefully nearing evidence of the structure.

a 1x1m square 2m E of original NW stake 0-20cm bgs.

few shreds

subject to change to 30 if nothing is found

April 16, 1990

P90-24-106

This is a 1x10 m trench heading SE up a fairly low mound. The mound appears to be on a natural hill, pretty high up, so there is lots of tumble coming off the E side of the structure. The most eastern end of the trench is a good 5 m before the steep incline starts. There is lots of obsidian visible on the surface of the hill, as well as shreds.

Lot 01 - a 1x1 m square 1 m S of original NW stake 0-20 cm bgs. finding obsidian (~~big~~ ^{few} flakes), shreds (one with a face on it - pretty make-shift), one platefoot 1 small bag of obsidian shreds not seeing much yet in terms of a structure

Lot 02 - a 1x1 m square 1 m S of original NW stake 20-40 cm bgs. coming down on a lot more shreds 20-30 cm bgs. mostly *Jicars* & *Conjo*

At 35 cm bgs apx. found a shud with a totally *Mian* face - headress and all. It does not appear to be a figure fragment as it is solid and flat on the back side. I have no idea if it is molded or incised, but it appears to be of an orangey *Jicars* paste with lots of shiny inclusion

Pat says it could be from a mold found in *Ellen's* area last season. Such a large face is an odd find.

Sort of what it looks like!
Apx. 6 cm wide & 6 cm tall
Thickest at the chin - like it protruded off of the rest of the body

1 medium size bag of shreds & obsidian fragments

Lot 03 - a 1x1 m square 2 m S of original NW stake 0-20 cm bgs. shreds

38C April 16, 1990

190-24-107

A 9m x 1m trench running essentially N-S from the bottom to the summit of the structure. I have no clue what the structure might be, though it could be a household compound W of the possible obsidian workshop that 38 B cuts across.

Lot 01 - 1x1m square 1m N of original SW stake 0-20 cm deep.
found a few shreds and jute 1 small bag

There is a sheet slab and a rock protruding in the middle of this meter

Lot 02 - 1m N of original SW stake 20-40 cm deep. around
sheet and rock
obsidian blades, jute, brazier piece, shreds
will continue tomorrow

April 17, 1990

Structure 2

P90-24-108

38A

Lot 03 - a 1x1 m square 1 m E of original NW stake 30-40 cm bgs.

I'm going down to 40 to make sure there is nothing else there.

* Found a nice worked chert tool, arrowhead. More shreds than prior lots

A small carbon sample came from 40 cm bgs.

90 cm S and 80 cm E of original NW stake.

I am encountering rock at 40 cm bgs. Will probably go to 60, but just will take 2nd meter to 40 - leaving a lot of rocks at first.

few shreds & chert tool - 1 bag

Lot 04 - a 1x1 m square 2 m E of original NW stake 20-40 cm bgs.

Clearing around rocks then taking out some tumble to 40 cm bgs.

1 small bag of shreds w/ one piece of obsidian

Lot 05 - a 1x1 m square 3 m E of original NW stake, 0-20 cm bgs.

There is lots of tumble here, lots of small stones -

hopefully I am getting close to the structure.

few shreds - only a handful, but lots of rock

1 small, small bag of shreds

Lot 06 - a 1x1 m square 4 m E of original NW stake, 0-20 cm bgs.

I am finding very few very small shreds

and one large obsidian piece w/ percussion rings

April 17, 1990

UNCLASSIFIED

P90-24-109

38B

1A59?

Lot 04 - a 1x1 m square 2 m S of original NW stake 20-40 cm deep.

Actually I'm taking this square down to 50 cm deep. to level it out with 1 m S of the NW stake. It is 40 at SW corner 45 middle³ I am finding some nice obsidian blades, obsidian flakes, chert flakes, and sherds (mostly ficars)

the soil 40-50 cm deep. has ~~some~~ ^{white chalky} bits in it. Is this the remnants of plaster? Or that chalky kind of rock? I don't know!

Also found a lumpy piece of hard pottery - It looks like a mishap all stuck together.

1 bag; obsidian, chert, sherds

Lot 05 - A 1x1 m square 3 m S of original NW stake 0-20 cm deep.

The white chalky stuff might be a plaster floor, since the soil is so dark. Ed says the soil looks that way when plaster decays.

There ^{are} more sherds coming out of here along with a figurine face and more obsidian blades and flakes

an indian face with ear spools

1 bag with sherds, chert, obsidian, ³ fig. frag

Lot 06 - A 1x1 m square 3 m S of origin at NW stake (trench wall)

20-50 cm deep - level with possible plaster remnants

1 bag w/ sherds ³ obsidian blades ³ flakes - still no structure 45 cm deep. at NW corner of meter

Lot 07 - A 1x1 m square 4 m S of original NW stake (tw)

0-~~40~~ cm deep. originally intended to go 0-20 cm deep., but will go down to 40 before bringing it down to the level of prior ~~lots~~ lot

1 bag of sherds ³ obsidian blades ³ flakes

The sherds seem to be getting more chafal

Lot 08 - a 1x1 m square 4 m S of original NW stake, leveling to prior lots 50 cm deep at N side 55 cm deep. at S.

I believe I've hit stone - 2 sherds ³ 2 obsidian bits from here

4/17/90

P90-24-110

1A57?

38C

Lot 02 - Continued from April 16
A 1x1 m square, 1 m N of original SW stake 20-40 cm lgs.

I'm running into lots of rock here

The rocks seem to run off to the E. I can't laterally clear yet, though, so I

STAND UP possible disruption by roots

might just push back a meter to see what happens. Perhaps if they the rocks continue SE there will be a clear connection or relation to 38A. That will show up more clearly in laterally clearing, but who knows. 1 bag of obsidian & shreds

Lot 03 -

A 1x1 m square, 1 m N of original SW stake, 0-20 cm lgs.
pushing back to see if rocks continue in pattern, or as tumble.
(can't see any rocks at this depth.)

Took out one very small bag of shreds and one piece of bajareque

Lot 04 - A 1x1 m square, 1 m S of original SW stake, 20-40 cm lgs.
finding few shreds and obsidian 1 bag 20-40
one piece of worked chert

Lot 05 - A 1x1 m square 2 m N of original SW stake, 3 m N of S trench wall, 0-20 cm lgs.

I am moving up over tumble a ways to see how far the tumble reached to try to get on the structure and away from 38A - structure for now

1 bag small obsidian flakes

A few shreds and bits and pieces of jk are showing up & bajareque
I'd say the rocks sketched above are probably tumble, so I will remove them later.

April 17, 1990

1A58 P90-24-111

380

Opening up this new trench 9m x 1m extending SE to NW up a large structure overlooking the ball court. When Lisa trenched here last season she found a nicely preserved wall. Well ^{am} on the E side of her trench where the structure seems better preserved. I am approaching a line perpendicular on the summit of the structure.

It will be interesting to see what this structure is as it does in fact over look the ball court.

Lot 01 - a 1x1m square, 1m N of original SW stake, 0-20 cm bgs. at 20 cm - there was a lot of tumble, so I put the stuff that was clearly tumble removed.

The bgs. is 0-20 cm bgs at 50-100 cm N of SW stake and 0-40 cm bgs. 0-50 cm N of SW stake

There were a few shreds in here - 1 small bag

Lot 02 - a 1x1m square, 1m S of original SW stake, 0-20 cm bgs.

I am trying to get off of the beginning of the tumble to get an idea of where the structure tumbled to - how far from the summit. Thus, possibly ~~it~~ can determine how high generally the summit was. Possibly?

The tumble is extending further back.

One bag (small bag) of shreds came out of this lot

Lot 03 - a 1x1m square 2m S of original SW stake 0-20 cm bgs.

looking for end of tumble - decided to go 0-40 cm bgs. less tumble

I have a sherd here different from any I've seen before.

It's red on orange (a light) orange probably a Conijo, but the design is small diamond with X's in the middle.

It looks like part of a jar body.  The painting is crude, but patterned none the less. The inside is a brighter orange.

1 bag of shreds and obsidian

* Need structure # 3 orientation of trench P90 ~~126~~ 126

Boy, I'm really guessing on this one -

I'm starting a trench on the structure W of Op 38G structure
1A58 is it.

Anyway it's a 1x6 m trench N to E mounting a surface
line at 4.4 m.

Lot 01 - a 1x1 m square 0-20 cm deep. 1 m E of NW stake
shards, obsidian, and some nice basaltic chunks.

Lot 02 - a 1x1 m square, 1 m E of NW stake, 20-40 cm deep.

The weirdest thing came out of here a shard
that has a design on it it the shape of a penis & testicles -
I swear.

It is so nasty.

Shit loads of obsidian ^{to chest} and lots of
shards - 2 large bags

Lot 03 - a 1x1 m square 1 m E of NW stake 40 to 60 cm deep.

mano, flint, obsidian blades, & shards

Lot 04 - a 1x1 m square 2 m E of NW stake 0-20 cm deep.

finish tomorrow

38A

Lot 13 reorienting trench to follow "I Dream of Jeannie" & "Rhoda"
 S stake is 50 cm S of orig. N trench wall
 N stake is 50 cm W of N trench wall
 The new trench is on a diagonal, I need a compass for ° reading
 0-20 cm in 1st meter

✓ The line though is not angling of as much now
 so I extended the trench to the S 50 cm
 so the reoriented trench is now a 1.5 x 4 m trench E → W
 few shreds G m F

Is this
 really
 done?

38A

April 20, 1990

P90-24128

Lot 14 - 8 m E of W trench wall, a 1×1.5 m area, 0-⁴⁸22 cm lgs.

Defining lines and walls

- Lou Grant

38 cm lgs. / Wide 3.5 m E of W trench wall

S side 3.8 m E of W trench wall

reoriented
at 104°

At the base of "Dear John"

- Dear John

S side 3.8 m E of W trench wall

N side 4.42 m E of W trench wall

15 cm lgs. 25 cm wide right next to "Lou Grant" on its (Lou's) E back side

- Rhoda

seems to connect to "Lou Grant" at a S W corner - and is immediately S of "I Dream of Jeannie"

28 cm lgs, apx 16 cm high

Between 40 - 48 cm from S trench wall, depending on where it is measured from - except for extreme S W point at beginning of reoriented trench where it is 80 cm from S wall

- I Dream of Jeannie

connects to "Dear John" at a S W corner 55 cm

N of S Wall (but seems to possibly extend even farther W. It is directly N of Rhoda)

It looks like I might have a primary at the N side of this matter are - have extended the N trench wall apx. 10 cm N to further expose what looks like 3 masked bowls.

68cm aprx is total span of
primary.

A³Bare strap
handles
Cisa nine

I bagged these pieces separately, but have a feeling the
other sherd bag has the rest of these vessels.

this debris 22 x 20cm

3. looked like Magdalena - the strap handle has a design

a person or what? I don't know -

Almost looks like the Post Classic
handles. I found surface collecting at Bismar

38A

April 20, 1990

p90-24-1324

Nice to see that the Primary sherd deposit showed up in the same trench wall as the dense cluster on the outside of Near John just a few days ago.

So we are now finding Bajareque mixed in where the primary was, as well as some "hidden" sherds.

Also obsidian in this lot 3 w/ primary
 The lot is extended 30 cm ^{to} get deposit out \Rightarrow 1.8 ^{m at beginning - 5' area} ~~at beginning~~
 1.5 m at w/side
 progressively skinnier to
 even out wall again

0 - 40 cm lgs.
 a good handful of obsidian
 blades & flakes

April 24, 1990

P90-24-142

✓ Lot 24 7m S of trench wall, a 1x1 m square. Going down in front of Bat out of Hell 20 cm \Rightarrow 70 cm deep.

* Bat out of Hell is exactly 8 m S of the trench wall 45 cm deep at lowest level / 20 cm deep at highest - (constructed of cobble stones)

finding few sherds?
one large obsidian flake

38B didn't pan out to well, so I am going to draw its section and leave it be.

I am opening a new sub-op J. It is an offshoot of 38C looking for ~~sherds~~ ^{For sale}. It comes in on 38C perpendicularly to come upon ~~the~~ ^{For sale} parallelly.

Its W trench wall is 50 cm E of 38C E trench wall.

It is a 3m trench EW oriented at 296 \circ 4.15 m N of 38C trench wall

- 38J 01 - A 1x1 m square, 1 m E of W trench wall. 0-20 cm deep.
empty lot - can hardly see for sale yet, but there are kinds of cut stone cropping up
1x.45

✓ 38J 02 - A ~~1x1 m square~~ 1 m E of W trench wall 20-40 cm deep.
right in front of lot few sherds? / obsidian piece
For sale is coming up beautifully

✓ 38J 03 - A 1x1 m square, 2 m E of W trench wall, 0-20 cm deep.
sherds 45 m area

38J 04 - A ~~1x1 m square~~ 2 m E of W trench wall, 20-40 cm deep.
area right in front of For sale
S of For sale

38~~2~~C

April 24, 1990

P90-24-143

✓ Lot ~~32~~³¹ ~~30~~

A. 7 x 1.7 m area W of possible line at 9 m N of S trench wall to approx. 10.7 m. 80-100 cm lgs. measured from E trench wall. 2 obsidian flakes 3 sherds

✓ Lot 32 Cleaning up area. 7 x 1.7 m 9 m N of S trench wall to approx. 10.7 m. Going towards Our Band to see if it goes deeper to meet A Light in the Attic sherds, 1 obsidian piece, 3 bajareque

✓ Lot ~~32~~³³ 12 m N of S trench wall, 1 x 1 m area - 0-20 cm lgs.

site, sherds, 3 2 obsidian pieces
It looks like A Light in the Attic just barely misses connecting to the lowest stone of Our Band - which appears to be at 70 cm lgs. 40 cm from top of Our Band

A Light in the Attic is 50 cm tall and starts at approx. 35 cm lgs. on E trench wall. It is essentially made of cobble - 4 cobbles high approx. 150 cm wide. No kind of bothering me, though that I can't see the NW corner of the wall. It just seems to dwindle off. There is no continuing rock in the profile on the N side of the wall, no evidence in the trench wall that we removed part of it. The only thing I can figure is that it might be further into the S. Maybe I'll flip away at it later.

Lot ~~32~~³⁴ 12 m N of S trench wall, a 1 x 1 m area behind possible line
20-40 cm lgs. - another nice indian face approx 4 cm high 4 cm across - different than others

Scarecrow and Mrs. King, 1m N of N wall

pulling out some large sherds from base of Dear John
in far SE corner of lot 40 cm bgs
sherds

Things are still pretty ugly here. There are faint hints
of Scarecrow and Mrs. King, but it really needs to be cleaned
up more to find it. After I get the profile of 38C drawn
I will be able to connect A & C and hopefully clarify the
N end of structure L. I need to keep going N until I am
off of the cobble so I can come back in and find the N
side of this baby. Also, I need to follow out Hart to Hart
more to the NW. It seems the more lines I follow out, the
more I discover they were not in fact lines. Maybe Monday
I'll have them move the backfill from between 38A & 38J
and seriously start pushing N.

Structure

Snufoloughagus - 86 cm E of 1st rock of Cookie Monster Faces W
 W face is 54 cm W of Hermit the Frog
 138 cm W of W trench wall at 50 cm S of N trench wall
 76 cm W of Cookie Monster 90 cm S from N end of CM
 It is a cobble wall, 2 cobbles high (apr. 33 cm exposed) and
 it starts 18 cm bsp. measured from the N trench wall.

Hermit the Frog -

14 cm bsp. measured from E trench wall, 1 cut block high (apr. 15 cm), clearest pt. is 50 cm E of Snaf's W face
 The wall is ~~not~~ composed of cut block and cobble of various sizes. Faces W

Cookie Monster - Faces E W?

First cobble is 80 cm S of N trench wall then the line crosses the trench diagonally to the N E.

It starts as 1 cobble 45 cm bsp. and turns into a wall 3 cobbles high, 45 cm tall, 8 cm bsp. at highest pt. in W trench wall. As it progresses S, cut blocks appear periodically

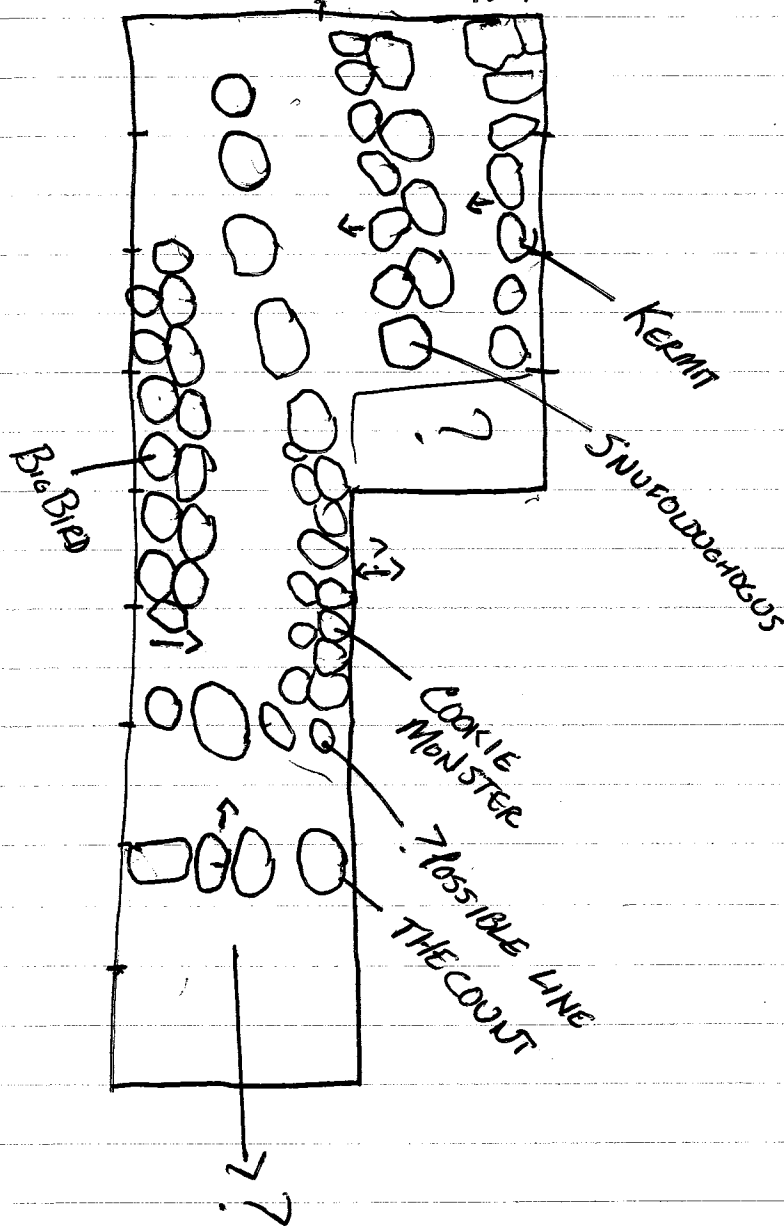

Big Bird - Starts apr. 2 m from N trench wall, it is apr. 15 cm bsp, 45 cm tall, 3 cobbles high. It faces E and it is still unclear how far it extends S. It is 26 cm W of W face of Cookie Monster.

The Count - This is a terrace at 7 m S of the N trench wall. It starts at 14 cm bsp. and stands apr. 26 cm tall. It is composed of cobble and cut stone. It faces N

P90-24-203

Named walls -

"The Boy With Long Hair" is a cut stone wall, one stone high running N-S meeting with For Sale at For Sale's Wend. The wall faces E and is possibly functioning as a wall for two structures, the second being the mound to the W of For Sale.

"Where the Sidewalk Ends" is a cobble wall, 1 cobble high w/ ^{small} cobble fill underneath, connecting w/ For Sale on For Sale's E side. It faces E and is apr. 6 m long N-S.

"Ma & God" is a cobble wall, 1 cobble high w/ fill under & above. It starts 1 m W of the corner of Warning, and runs N-S 1 m W of Invitation & faces E.

"Invitation" joins Warning at a NW corner. Only the cornerstone is 1 stone after one clear. It is 4.5 m W of E corner of Warning.

It is cobble, apr. 30 cm hgt. oriented N-S. 1 m E of Ma & God, faces W.

P90-24-204

1m N of N face of $S^3 S$, looking for corner of Courtship, 1m E of W face of Courtship, a 1×1 m square. O - 40cm lgs.

obsidian blades $\frac{2}{3}$ flakes $\frac{2}{3}$ shreds

64 A 1×1 m square, looking for Ext. of $S^3 S$, 1m N of N face of Angin
20cm S of N face of $S^3 S$ - 80cm N of N face of $S^3 S$
3. 3m E of W face of The Courtship, 40 - 75 cm lgs.

obsidian $\frac{2}{3}$ shreds

obsidian core (w/ cortex, or just really decayed $\frac{2}{3}$ chert on one side?)

There is lots of chert here, disrupted by roots at approx. 45 cm lgs. Maybe at one time this was a surface, but now it is very disrupted. One lava slab is 50cm x 30cm.

Have you ever seen obsidian concentrations before?

38C 85 1m S of Invitation, 2m E of Ma³ God E face, 1.3m S of Warming, a 1×1 m square O - 40cm lgs.
Looking to see if Invitation corner is really a corner
shreds finish tomorrow

May 17, 1990

P90-24-205

38A

- ✓ 65 A 1x1 m square, looking for East. of Laverne & Shirley, 1 m N of N face of Angie, 20 cm S- 80 cm N of N face of Laverne & Shirley, 4.3 m E of W face of The Courtship of Eddie's Father. 0-20 cm deep.

shards

- ✓ 66 A 1x1 m square, 2 m N of N face of Angie, 1.8 m N of N face of Laverne & Shirley, 3.3 m E of W face of The Courtship of Eddie's Father. 0-20 cm deep. Obsidian, shards, & more frag.

- ✓ 67 A 2x1 m area, 1 m N of N face of Angie, 1 m S of N face of Laverne & Shirley, 3.3-4.3 m E of W face of The Courtship of Eddie's Father. 0-10 cm deep.

obsidian core, shards

- ✓ 68 A 2x1 m area, 1 m N of N face of Angie, 1 m S of N face of Laverne & Shirley, 3.3-4.3 m E of W face of The Courtship of Eddie's Father. Removing tumble 10-20 cm deep.

basaltic, shards & obsidian

It looks ok. compared to the rest - Angie is coming through as a line of cobble - stacked 2 cobbles high in some places.

- 69 Trying to see what happens to Laverne & Shirley as it heads E - 3.3 m E of W face of Courtship. 1 m S of N face of I 3 S. 0-20 cm deep.

basaltic, obsidian, & few shards

2 pieces

lots of tumble - will have to remove tomorrow to see what happens to I 3 S

38C

May 17, 1990

P90-24-206

- ✓ 85 A 1x1 m square, 1m S of Invitation, 2m E of Ma 3 Good E face, 1.4m S of Warning. Looking to see if Invitation corner is real - 0-50 cm deep. sherds, obsidian, 3 bajareque.

Invitation corner does not connect w/ Invitation line - The line is approx. 60 cm E of supposed corner of Warning.

- ✓ 86 To define Warning/Invitation corner, a .6x1 m area, 1.6 m S of Warning N face, 2m W of 38C W trench wall, taking out area between Invitation corner & "new" line to see if "new" corner can be found. 0-40 cm deep. obsidian 3 sherds

I think I found the real line approx. 60 cm back E from where I thought it was before.

- 87 Clearing out tumble in front of line, 1m S of N face of Warning approx. 1.5 m E of Ma 3 Good. 40-50 cm deep.

Now it looks to me like Invitation is in fact the W wall, only it is 2 cobbles wide. There are 2 lines of cobble at the W end of Warning running N-S

bajareque, sherds, 3 obsidian

- 88 Cleaning up area immediately N of Bon (conductor), 1m E of Whale

Whale - a line 1 cobble high at E end of Hug O' hwa

May 21, 1990

P90-24-208

Name	Height from top	Width	Length	Orientation	Materials Used	Description
Petunias pt. taken	.08-.78m ⇒ .7m high	.4m	extends whole m of trench	288° face S	large river cobbles in 2 courses middle sized one is .28x.2m the other 4 are slightly larger or smaller chinking stones fill in area underneath the cobbles: .53m bgs	This is a fairly high wall once again very disturbed by root activity. It extends through two humus layers, but not into the ashy soil. It could have possibly coupled w/ Naisius to make a thick wall. Its S face is .72m S of S end of Naisius and its S face is 1.74m N of granitic S face.
Naisius pt. taken	.36-.46m ⇒ 20cm high	.55m	extends whole m of trench	207°	large river cobble .32x.28 mainly, some smaller, .15x.2m and some chinking stones to fill in gaps.	There is lots of root activity here again as the wall is mostly in humus. Its S face is .72m N of Petunias S face and .68m S of Daisies N face.

S face is 5.2m
N of trench
wall

S face is
5.96m N of
trench wall.

* Note: It appears that Naisius and Petunias might have coupled together as one thick wall 1.08m wide. I say this because the profile looks like this:

The whole area is so disturbed by roots, it's really hard to determine the function of these two lines and how they related to each other. They are very close - .68cm - to the summit lines.

May 22, 1990

P90-24-209

The Three Summit Lines

Name	Height from top	Width	Length	Orientation	Materials Used	Description
Irises pt. taken	.24-.5m top. => .31 m high	.32m	extends whole m of trench	285° faces S	cobble avg. 32 x .28 m for 2 courses small chinking stones used as fill	This wall is 3 cobbles high. It is made of medium sized cobble and chinking stones. It is somewhat disturbed by root activity. The wall is in humus with root activity. It is .68 m N of Violets N face, .32 m S of Violets N face. It is the southern most summit line of the three, Irises, Violets, and Tillis.

S face is 6.64
m N of S trench wall

Note - The three summit lines combine to form what was once a thick summit wall. Irises is the southern most line, Tillis the northern most, and Violets is in the middle.

May 22, 1990

P90-24-210

Name	Height from bsp.	Width & Length	Orientation	Materials Used	Description
Violet	to m absp. - .32 bsp \Rightarrow .38 m tall	extends full 1 m of trench .36 m wide S face is 7.02 m N of S trench wall	287°	Medium sized cobble, .34 x .23 m, and small cobble, - .13 x .22 m. Few small chinking stones fill in the gaps. The stones do not appear to have as much uniformity in shape as those in Iris & Lillies.	This is the middle line of three lines that form the summit feature/ wall of this structure. It is .25 m higher than Iris at its highest point and .1 m higher than Lillies. S face is .32 m N of Iris S face and .38 m S of Lillies S face.
Lillies	.9 cm bsp. - bsp. \Rightarrow 2.35 m tall	^{.44} .35 m extends full 1 m of trench, .37 m wide	278° faces N	Medium sized to large cobbles, .38 x .3 m and small chinking stones, some basalt to fill in the gaps.	This is the Northern most summit line, facing N. Like the other two, it is in humus and is slightly affected by root activity. It is .38 m N of Lillies S face. N face is .76 m S of Peonies S face.

May 22, 1990

P90-24-211

Taking another look at the W trench wall, it appears that at one time the summit might have been even wider. This area is very disturbed by root activity, so it might be likely that other lines could be completely destroyed or missing. But, there are some rocks in the wall of Lillies that could have at one time been two summit lines, making Lillies the middle line, and perhaps Peonies the Northern most summit line.

If it is true and these two '?'s are actual lines (They appear in the W wall clearly, but not the E), then the summit wall tumbled would be approx. 2m wide instead of 1.2m wide.

The '?'s are made of medium sized cobble and one basalt stone.

May 22, 1990

P90-24-212

Name	Hgt. from bgs.	Width / Length	Orientation	Materials Used	Description
Peonies pt. taken	0.5m - .4m bgs \Rightarrow 1.15m high .54m .49m high	extends the full width of trench .34m wide	20° 40' faces N	Medium Medium \Rightarrow Large cobbles, .36 x .38 is the largest and small chinking stones	This wall is composed of medium-large sized cobble, 2 courses, with chinking stones underneath. It is in humid layers and is highly disturbed by root activity. It resembles Iris in construction (which could make sense if th ?'s are summit lines and Peonies \Rightarrow Iris are the outside walls.) N face is .83m N of Alkis N face .35m N of ? #1 side, 2.05m S of Carnation's N face.

N face is
8.59m N of Stench wall

Depending on interpretation of ?'s #1 & #2 the function of Peonies is variable. If ?'s #1 & #2 are in fact lines, then Peonies can be the Northern most summit line, joining with Violets to be an outside face of an extremely thick summit wall.

If, on the other hand, ?'s #1 & #2 are not lines, then Peonies may be a sole standing wall.

It is very hard to determine this line's actual function viewing only the profiles of a very disturbed trench.

May 22, 1990

890-24-213

Name	Hgt. from bgs.	Width? Length	Orientation	Materials Used	Description
Car Carnations	.23-.64m bgs \Rightarrow .41m high	extends full 1m of trench .44m wide	289° faces N	The largest stone here is a square cobble .44 x .3m, then two medium sized cobbles and one basalt cobble are used. There are some chinking stones surrounding the line, but they appear to be rubble as they do not consistently function to fill in gaps or anything.	This line is one course of cobbles. It is in humus layers and is very disturbed by roots as there is a small bush growing on top of it. It is pretty far N of Peonies and the summit lines, so I suspect this was part of a terrace facing N towards the ball court. Its N face is 2.05m N of Peonies N face? .83m S of Mums N face.
Mums pt. taken	.05m bgs.- .56m bgs. \Rightarrow .51m high	extends full 1m of trench .396m wide	285° faces N	The top course of this wall is composed of medium sized cobbles .39m x .20m. Chinking stones are used as fill underneath the course of cobble.	This wall probably served as a terrace. It is in humus soil with lots of root activity throughout. N face is .82m N of the N face of Carnations. N face is .78m S of Chrysanthemums N face.

Chrysanthemum pt. taken	.1-.34m lgs \Rightarrow .24m high	extends full 1m of trench .27m wide	284° face is unclear	There is one course of medium sized cobble here, .25 x .26 m.	This is a cobble line, probably a terrace as it is significantly lower than Mums and is at the N slope of the mound facing the ballcourt. It is in humus and is very disturbed by root activity. It is (on face) .78 m N of Mums N face.
			N face is 19115° 12.25 m N of trench wall.		

May 22, 1990

PGO-24-215

38D is a 12.4 m trench N/S over structure 1A59. This is an oblong mound overlooking the ball court. The construction techniques at least on the E end of this mound appear to be extremely informal as only cobble is apparent, no cut stone appears in this trench. In '88 another excavation up the center of this mound's N side, facing the ball court, revealed nice terrace walls. 38D, though is so disturbed by root activity, nothing like this was discernable or apparent.

Another trench 38G extends up the W side of the same mound, running N/S parallel to 38D. Perhaps final comparisons of these two trenches, coupled with the work done in '88 on this mound will reveal more about the structure.

I present now some general conclusions and theories in respect to 38D and its relationship to the ball court and cluster of mounds.

From 38D trench, it is not obvious where the entrance to this structure ~~was~~ was, although it seems to me it is probably from the S, since '88 showed bench like terraces facing the ball court.

Not much came out of this trench in terms of artifacts. In fact I had several empty lots. I did find some sherds and obsidian. This, to me, suggests that perhaps this structure had a more formal function and was kept cleaner than most areas. I will be curious to see if sherds suggest formality or something more utilitarian.

The construction takes place in the humus layer. This suggests that the ash/sand found apr. 60-80 cm deep around the site is from a previous occupation.

Finally, I will be interested in determining if this structure ties in more closely with the living cluster here on this hill, the ball court at the bottom of this hill, or both.

May 22, 1990

PGD - 24-216

38B is a trench running η S along Structure 1A 57. It is 11.3 m long and has an E West. Between 7.7 & 8.7, 4.2 m E & 3 m W.

There is one poorly preserved wall in this structure / trench -

Bat Out of Hell

- It is .08 - .62 m lrg. \Rightarrow .54 m tall
- Starts at 3.2 m E of E trench ext. wall \Rightarrow 1.1 m E of orig. E trench wall, and extends to W trench ext. wall, 6.2 m W of ext. E trench wall, \approx 3 or 4 m E of orig. E trench wall.
- It is oriented at 244° and appears to face η .

This wall is made of medium sized ^{cobble} ~~cobbles~~ and basalt stones in two courses. Chinking stones are used as fill in ~~between~~ between and below second course of cobble.

This wall is in humus for approx. 30 cm and a grey soil with white inclusions for the bottom 24 cm. It is very disrupted by root activity. Essentially the whole trench was tumbled and not much valuable architecture was found.

Artifacts from here included lots of obsidian blades, a core or two, and some shreds. They will be valuable when ~~determining~~ determining the function of the living cluster here.

A burial was found in '88 at the E side of this structure. Recalling these notes would greatly supplement the work on this particular trench since there is not a lot to go on here in comparison to the other structures near by.

Name	Hgt. from top	Length & Width	Orientation	Materials Used	Description
The Courtship of Laddie's Father	.36 m bgs- .48 m bgs. => .12 m tall	4.78 m long .54 m wide at widest pt.	17° faces W	Medium sized cobble stones, some medium sized basalt stones, chinking stones, and one squared off large cobble	The Courtship of Laddie's Father runs parallel to Scauncrow, Lou Grant, & Near John. It is one course of cobble with a few chinking stones as fill. It forms a corner with Rhoda at the SW and runs underneath Laverne and Shirley's W point. It continues on to the N, forming Patty Wukio's corner with a large 54x30 cm cut cobble. It continues another .68 m past Patty Duke.

① Rocks are flat laid behind Scauncrow's Mrs. Ling. Scauncrow ends at about the same spot where construction changes.

② Courtship becomes more of a wall. Nothing is in front of it and it intersects with two other walls here.

It is well preserved and hardly disturbed by roots. It is in a clay-brown soil.

Interesting that the construction changes at the point where the platform ends at the N. Courtship, then, served two purposes; a terrace line leading up to the platform on its S half, and a wall (shallow) on its N half.

Laverne & Shirley S	.54m. .7m bgs \Rightarrow .16 total	.25m wide .85m long	70 faces E	Small cobble course with chinking stones underneath	Laverne & Shirley S forms a corner with the E end of Laverne and Shirley and the W end of Get Smart. There is one point in the wall where 2 cobble courses appear. The wall runs N S and from the top is in line with Waltons S, but Waltons S faces W and Laverne & Shirley S faces E.

May 22, 1990

P90-24-228

Structure I seems to be a platform for an open air structure facing N. It is mostly constructed of cobble, but the walls seem to be built meticulously as orientations align well. The structure might have served as a working area for the larger structure it faces, 1A 58 with cut stone terraces.

One primary of shreds was found here in the area between Hart to Hart and Quincy. Other artifacts include obsidian, manos, and metates, but not a lot of lithic which leads me to believe the structure was

The S trench wall is full of cobble chert stones. This suggests to me that there might be another structure directly S of Rhoda.

open air of wood and palm or thatch.

The areas to the N - W of Patty Duke E and E of Waltons N, have lots of chert. The platform top is mostly chinking stones, but some chert was found here too. This suggests floors to me, living

surfaces w / open air structures on them.

May 22, 1990

P90-24-229

With all the measurements and orientations taken, it is now time to look at how the construction fits together and if different phases can be detected.

Structure L is essentially a basal platform:

with a platform built on top of it

- Now, Laverne and Shirley definitely post dates The Courtship of Eddie's Father as the Western of Laverne and Shirley is on top.

But does this mean Laverne and Shirley was built a day later, or 10 yrs. later?

It's hard to say because the construction techniques used for both walls are similar; uniform medium sized cobbles with chinking stones underneath. If any part of The Courtship of Eddie's Father substantially predates Laverne & Shirley, I would guess it would be the part that is essentially a line.

May 22, 1990

P90-24-230

So, it would be feasible that the basal platform was constructed up to the point where Scarscrow and Mrs. King end on the N, and Lavonne and Shirley and the rest of Courtship was added on later. Perhaps the basal platform served as a living surface first, then the secondary platform was added later. The only clear way of finding this out would be to excavate through the platform.

It would seem just as feasible to me that the structure was made at one time since looking at the profile of Rhoda and I Dream of Jeannie shows no basal rocks from an earlier platform. If Scarscrow was part of an earlier platform along with the Courtship of Eddie's Father, I would expect to see more lines like those in profile under the second platform, and I don't see them there. Nor do I see sheds deep in the profile which would indicate previous use.

- Hart to Hart and the continuation of Rhoda past the platform look, to me, like a late effort to add on a terrace.

The construction of Rhoda changes from nice uniform cobble and chinking stones to cut block remnants. It might have been prettier than the cobble wall at one time, but looking at it now, I am doubtful. Hart to Hart has the same strange mixture of rocks.

- Waltons and Patty Duke also have very different construction techniques, though they seemingly serve the same purpose of a walkway.

O - PDN

Waltons in Cut stone and Patty Duke is cobble. It makes me wonder if 1A57 remnants were used here.

May 22, 1990

P90-24-231

By setting up a datum point with a line level between Structure L and 1A57, it is apparent that the front terraces of 1A57 start at .55m bgs. as do the cobbles of Patty Duke. Thus, perhaps it is safe to say that at one time both structures were occupied co-temporally.

The wallway of Structure L opens up to the cobble part of the 1A57 terraces. Perhaps the informal part of the terrace facade has formal, yet still formal outside building for work.

Finally, the orientations on lots of these parallel lines are within only a few degrees of each other.

For instance I canrow 3 Mrs. King is at 20°

The Courtship of Eddie's Father is at 17°

Dear John is at 20°.

This indicates some meticulous handy work and specialization to me. It makes this open air structure more formal, which makes me tie it in with the cut stones of 1A57 more confidently.

Except on a few lots where it's 7° off
Here or there

P90-24-246

Name	Hgt. in bgs.	Width ³ Length	Orientation	Materials Used	Description ³ Provenience
U ₆	.95 → .98 m bgs. ⇒ 1.03 m tall	3.18 m long .5 m wide	88° runs E-W faces N	large cobbles .5 x .3 m said flat in a line	3.18 m into 38° W trench wall, Affareis 1.26 m N of S face of Lazy Jane. ³ 1.12 m S of Warning N face. This could possibly be the N face of Lazy Jane ³ Trash wall

Making this wall 3.18 m long into trench wall ³ 1.26 m wide. This would give the N side of the building a very different look than the S - construction is so much different - large cobbles here ³ medium cobbles ³ chinking stones for Lazy Jane's side. There are not many chinking stones scattered around U₆.

So, instead, it seems that U₆ was probably a terrace, 3.18 m long into trench, for Lazy Jane/Trash. It extends .86 m further E than Lazy Jane/Trash. It was probably part of the early construction due to the fact that it is below Trash.

Its orientation is also a little off to be the same line as Trash ³ Lazy Jane - 88° as opposed to 104°, it runs N-E.

May 24, 1990

PD-24-247

Name	Hgt. from bgs.	Width ³ Length	Orientation	Materials Used	Description & Provenience
Warning	1.1-1.33 ⇒ .23m tall	3.6m wide 4.08m long	105° faces N runs EW	medium sized cobbles 1 course	This is the N basal wall of 1A57. It is 1.12m N of N face of N face. Its E end seems to line up with W half, but plan pts. will show for sure. It is 1.42m E of 38C W bench wall at farthest E pt. It corners with Invitation at a NW pt.
Invitation	1.2-1.31m bgs. .11m tall	1.48m long .26m wide onto Stench wall	15° runs N faces W (perfect 90° w/Warning!)	medium sized cobbles 1 course	This is the N basal line of 1A57. It corners at the NW face Warning. It is 1m E of Ma 3 God E face.
Ma 3 God	1.27 ⁹¹ m bgs. alt 1.13 .36m tall	2.03m long into Stench wall 1.2m wide	4° runs N faces E	small (1 course) cobble w/ chunking stones underneath	This wall faces Invitation 1m stands between Invitation's face & Ma 3 God's E face. It seems that this might be from the neighboring structure as Invitation is the W boundary of 1A57.

May 24, 1990

P90-24-248

Points of Interest

- 1) Emily Dickinson S W face, Boa Constrictor E of Whale Upper E point, and W point, beginning of For Sale cobble construction line up in a NS line.
- 2) The Easternmost point of Lazy Jane / Trash wall, where it is still stacked in three courses, lines up with Whale E face apparently.
- 3) A Light in the Attic, Lazy Jane / Trash, and Us appear in the same soil levels and the same lgs. in profile. They seem to be co-temporal and earlier than Sick, Boa, Our Band, Whale, and Hug O' War summit features.
- 4) Boa Constrictor appears to be first, then Boa EU, then Boa EL.
- 5) Platform 1 seems to be co temporal with For Sale cobble addition.
- 6) Poe seems to be the basal line for Light / Trash construction phase.
- 7) Warning and Invitation might have been there all along.
- 8) Platform 1, cobble For Sale, and Structure 2 cobble entrance all line NS to the eye 3 pretty close on plan.
- 9) A soil change of dark brown w/ white limestone specks in area

may indicate that area was filled to cover Lazy Jane, Trash, and Maybe Light. Although surface of Light could have been used w/ Platform 1's Boa Summit.

May 26, 1990

1A57

1A57 is a unique building in that the summit features were constructed right on the dirt. It was a living area, a house, with a formal S front and an informal extension of a cobble terrace and platform to the E. The informal constructions are oriented to face the informal open air / workshop area of Structure S's entrance way.

The building 1A57 seems to have gone through at least ^{two} ~~three~~ construction phases. First, extending an E platform and E cobble terrace, then extending the terrace S, ~~and extending~~ ~~original summit lines to said areas.~~

No post holes can be seen, but some bajareque was found leading me to believe the superstructure was bajareque. At one point, more contemporary people (1920's-50's) seem to have been using this mound as a refuse heap for house building materials: shingles, nails, metal scraps, etc. But, generally, the area is fairly well preserved.

Many, probably six, obsidian cores were found associated with the S terrace, For Sale, and the inside summit features of this structure. Most were found outside For Sale and to the E of the structure near 1A59. The test pits at the base of the natural rise 1A57 and Structure S are constructed of turned up lots of obsidian flakes. This leads me to believe the people here were working lots of obsidian blades and arrowheads, like the one in S. Across the site in Structure C and X, similar refuse has been found.

A burial was found behind A Light in the Altis and could be associated with the second construction phase.

Hopefully an analysis of artifacts and soils will tell me more about function and construction of 1A57 and the surrounding cluster.

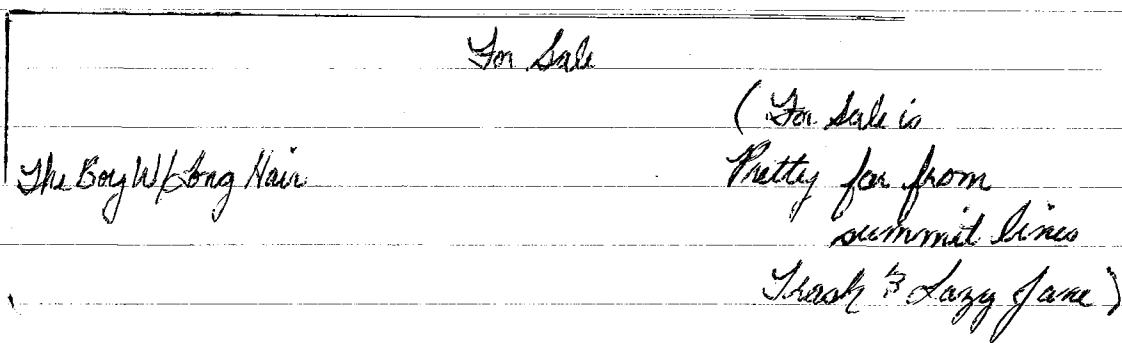

May 26, 1990

P90-24-200

* Pat is not keen on the "covering up" idea, though she does agree to the general addition of an informal platform (1) in line w/ cobble terrace addition.

But here it is anyway!

Version 1

... might be present if we could dig through latest walls

* Living surface on original dirt.

May 26, 1990

P90-24-251

1

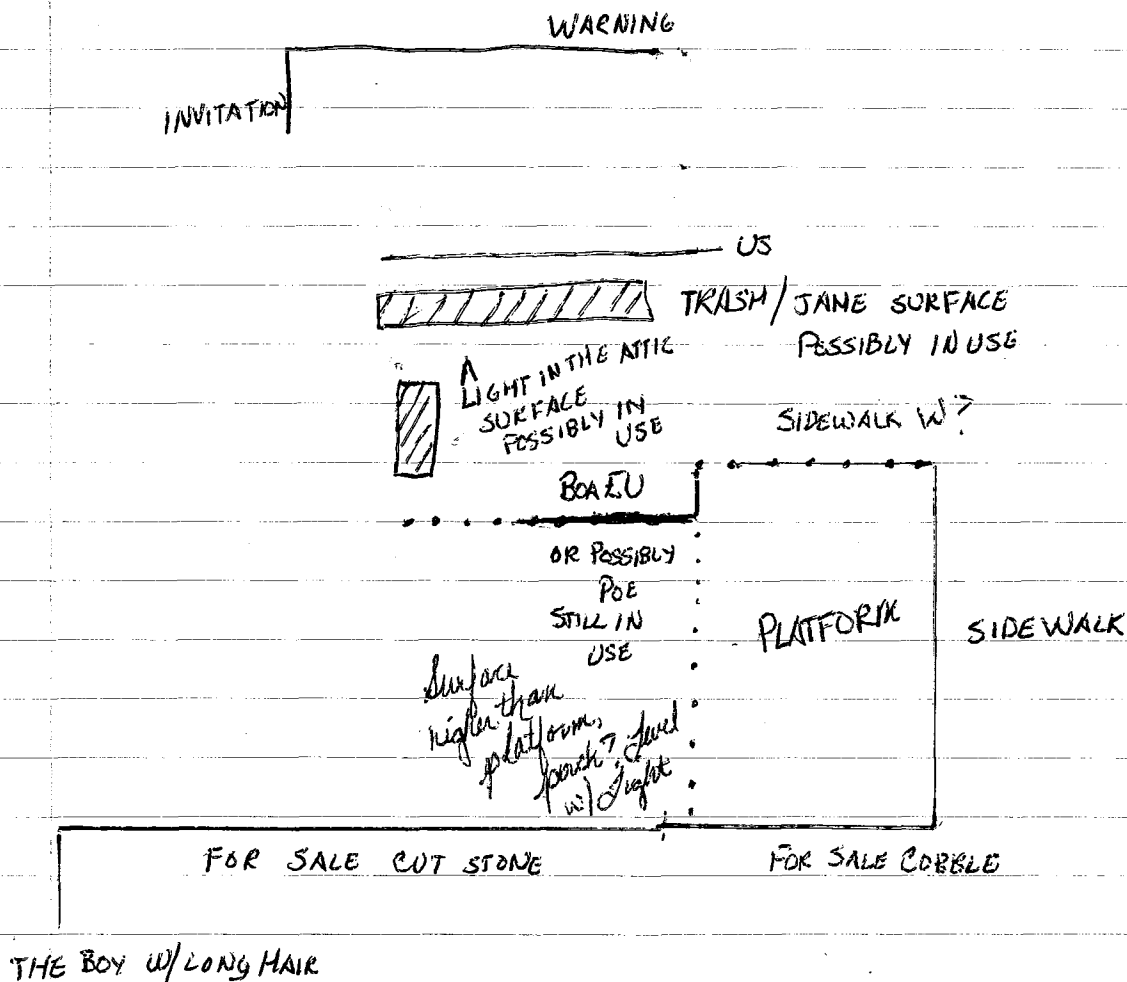

Pse serves as the central wall - possibly exists under Boa summit cluster and is apparent in profile under Boa E. Upper.

A Light in the Attic is in use as a room divider. Ground surface was used as a living surface. Trash / Lazy Jane formed a thick basal wall. It was a terrace, Warning an outside terrace. And perhaps For Sale was already there in cut stone form.

May 26, 1990
Version 2

P90-24-252

N?

* Living surface on fill dirt

... possible line in unexcavated area
or area w/ later construction on top

May 26, 1990

PPD-24-253

2 Poe was raised into Boa Constrictor E of Whale Upper. Cobble was added to For Sale's W side and where the Sidewalk Ends was constructed to form a SW corner with For Sale. Sidewalk may have turned W to join Emily Dickinson S as Sidewalk seems to proceed Anne Bradstreet in construction. It is under Bradstreet. This would form the first platform/porch for 1A57.

Dirt might have been deposited to create a living surface level with the platform, thus covering the base of A Light in the Attic and Trash/Jenny Jane/Uo. Perhaps the surface of A Light in the Attic was used. It was during this deposition that the body was probably buried behind A Light in the Attic. I believe the soil here is fill dirt because of the high density shard concentration in the W profile corresponding to these "old" features and a soil consisting of dark brown clay-like dirt with possible lime deposits. A little different from other areas in the trench.

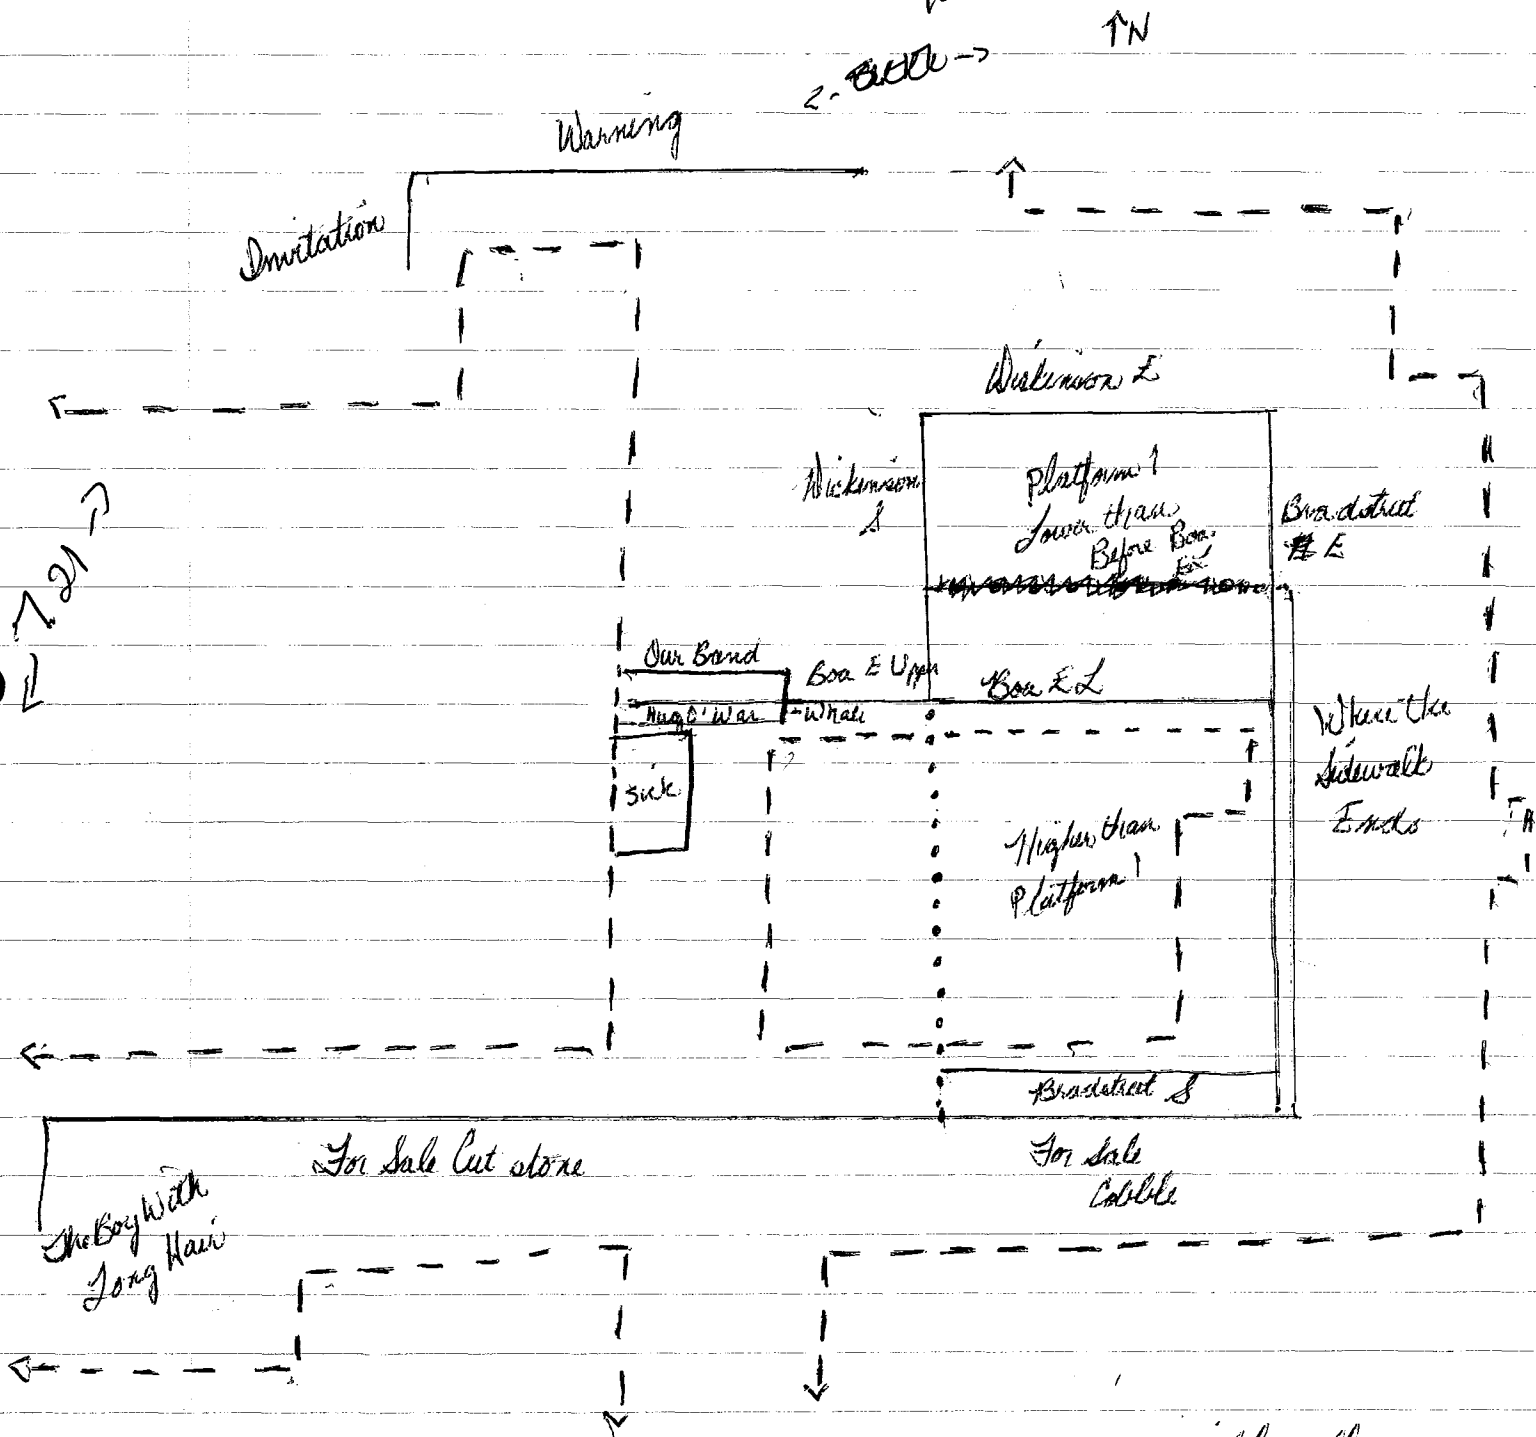

Added - Poe possibly raised, cobble for Sale, Sidewalk, part of Emily Dickinson S.

Covered - A Light in the Attic, Trash/Jenny Jane, Uo bases, possibly Poe

In this version, A Light in the Attic, Ash/Jane, 3Bs are covered up and out of use. Boa is extended E and W it is part, the middle, of three summit lines ~ Nug O'War, Boa, and Oak Band. Whale cuts the raised Boa off and lets it drop. It drops again where Wilkinson S starts and extends to Bradstreet E. Bradstreet S, Bradstreet E, 3 Boa E Lower form a new platform on top of the old then the platform chaps off and extends Nw/Bradstreet Wilkinson E,

Addl - Wilkinson E 3 part of Wilkinson S, Bradstreet S, 3 E,
Boa Constrictor W of Whale, Boa Constrictor E of Whale Tower
Oak Band, Nug O'War, and Sid.

Connect - A Light in the Attic, Ash/Jane/Trash, 3Bs
sidewalk possible W line

May 26, 1990

P90-24-256

Proposal #2 - (approved by Pat.)

Your idea -

~~Chillun~~

Since construction methods of summit lines Boa, Uva Band, and Nug O'War use the same types & colours of river cobble (small- & medium - red to grey) it can be argued that Sick, Trash, Light, and summit lines were in use at all times. A Light & Trash would not have been covered then as summit lines & platform were extended.

Also, a common construction technique was to skirt basal walls. Thus Sidewalk skirts Bradstreet. This probably makes more sense than calling Sidewalk an original basal wall since it doesn't show up in the platform profile W face. I have no idea, though, why it ends before Bradstreet, S of Bradstreet corner.

Anyway, these ideas simplify the building and construction phases. Essentially the first version could have been as it is minus the cobble terrace & platform & the extensions of Boa Constructor.

This does not answer for me:

1. The different soil at the back of A Light.
2. The burial at back of Light - I would have showed if this structure was uncovered.
3. The use or non use of Poe.
4. The end of Sidewalk.

It does explain -

1. What happened to these features - Trash & Light and lets them define rooms.

38G Final Notes

May 28, 1990

38G and 38D North transect 1A58. 1A58 is an important structure because it faces the ball court and also ties in with the possible obsidian manufacturing center. An extensive comparison between 38D & 38G is imperative to understanding this structure. The West end of 1A58 had considerably more sherd than the E (38D) which had virtually none. The N side of 1A58 is poorly preserved due to most soil activity & downhill erosion, though it seems that there were terraces facing the ballcourt. These terraces produced little or no artifacts - they were probably swept pretty clean.

Only a comparative analysis with 38D will help solve structure 1A58 along with glances back to the aerial trench through the North Central part of this mound in 1988.

The datum for 38G is 116 m above actual ground surface at the pt. It is on the summit, W of the orig. W trench wall, even with the center of Jolly Beans
